

ESD-compatible all-rounder – iglidur® F2

Used to prevent electro-static charges

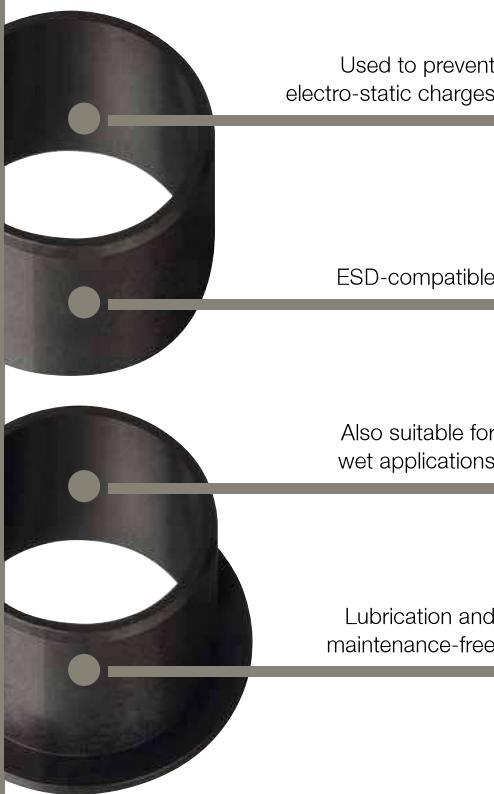

Also suitable for wet applications

Lubrication and maintenance-free

Standard range from stock

Electrically conductive

Used to prevent
electro-static charges

ESD-compatible

Also suitable for
wet applications

Lubrication and
maintenance-free

iglidur® F2 helps to prevent electrostatic charging. Good resistance to media and temperature, suitable even in wet conditions due to low moisture absorption and good universal wear values pave the way for a wide range of applications.

**When to use it?**

- When the bearing should be electrically discharging
- When a universal bearing is required for a broad application range

**When not to use it?**

- When a universal bearing without static discharge capacity is required
 - ▶ iglidur® G, page 79
 - ▶ iglidur® P, page 113
- For underwater use
 - ▶ iglidur® H370, page 305
- When extremely high wear resistance is required

Shore-D hardness		72	DIN 53505
Physical and thermal properties			
Max. long-term application temperature	°C	+120	
Max. short-term application temperature	°C	+165	
Min. long-term application temperature	°C	-40	
Heat conductivity	W/m · K	0.61	ASTM C 177
Coefficient of thermal expansion (at +23 °C)	K⁻¹ · 10⁻⁵	5	DIN 53752
Electrical properties			
Specific contact resistance	Ωcm	< 10⁹	DIN IEC 93
Surface resistance	Ω	< 10⁹	DIN 53482

Table 01: Material properties table

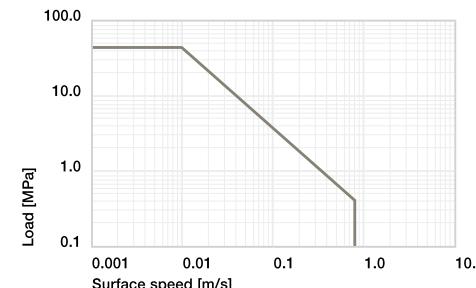

Diagram 01: Permissible pv values for iglidur® F2 bearings with a wall thickness of 1 mm dry running against a steel shaft, at +20 °C, mounted in a steel housing

Moisture absorption

The moisture absorption of iglidur® F2 plain bearings is approximately 0.2 % weight in standard climatic conditions. The saturation limit in water is 0.4 % weight.

▶ Diagram, www.igus.eu/f2-moisture

Vacuum

iglidur® F2 plain bearings outgas in a vacuum. Use in vacuum is only possible with dehumidified bearings.

Radiation resistance

Plain bearings made from iglidur® F2 are resistant to radiation up to an intensity of applications $3 \cdot 10^2$ Gy.

UV resistance

iglidur® F2 plain bearings are partially resistant to UV radiation.

Medium	Resistance
Alcohol	+

iglidur® F2 | Technical data

The prevention of electrostatic charge is an important requirement in many application areas. At the same time other technical application parameters such as wear resistance, media and temperature resistance, suitability in a wet environment, etc., cannot be neglected. iglidur® F2 with its wide range of properties constitutes another universal bearing for numerous "ESD-compatible" applications.

Mechanical properties

With increasing temperatures, the compressive strength of iglidur® F2 bearings decreases. The diagram 02 shows this inverse relationship. The permissible maximum surface pressure is a mechanical material parameter. No conclusions regarding the tribological properties can be drawn from this.

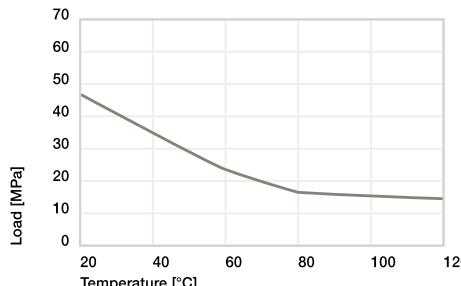

Diagram 02: Permissible maximum surface pressure of iglidur® F2 as a function of temperature (47 MPa at +20°C)

Diagram 03 shows the elastic deformation of iglidur® F2 at radial loads. A plastic deformation can be negligible up to this value. However, it is also dependent on the service time.

► Surface pressure, page 41

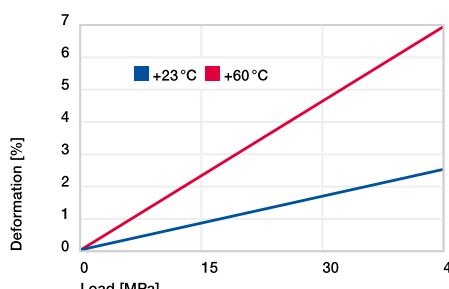

Diagram 03: Deformation under pressure and temperature

Permissible surface speeds

The maximum permitted surface speeds are based on the operation period and the type of motion. A bearing is the most stressed in long-term rotating motions. Here the maximum speed for the iglidur® F2 bearing is 0.8 m/s. The maximum values specified in table 03 are not often attained in practice.

► Surface speed, page 44

m/s	Rotating	Oscillating	Linear
Continuous	0.8	0.7	3
Short-term	1.4	1.1	5

Table 03: Maximum surface speeds

Temperatures

The ambient temperatures strongly influence the features of bearings. With increasing temperatures, the compressive strength of iglidur® F2 bearings decreases. The diagram 02 shows this inverse relationship. At temperatures over +70°C an additional securing is required.

- Application temperatures, page 49
- Additional securing, page 49

Friction and wear

Coefficient of friction and wear resistance alter with the application parameters (diagrams 04 and 05).

- Coefficients of friction and surfaces, page 47
- Wear resistance, page 50

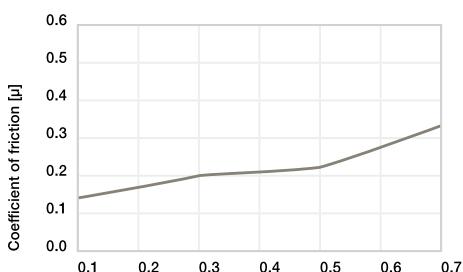

Diagram 04: Coefficient of friction as a function of the surface speed, p = 1.0 MPa

iglidur® F2 | Technical data

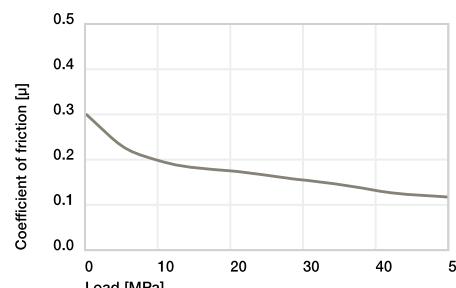

Diagram 05: Coefficient of friction as a function of the pressure, v = 0.01 m/s

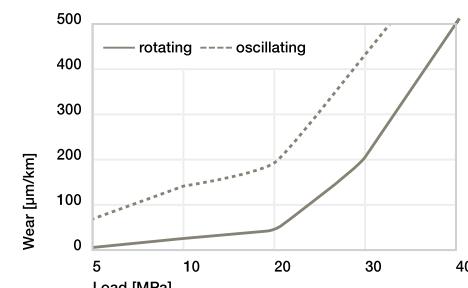

Diagram 07: Wear for oscillating and rotating applications with shaft material Cf53 hardened and ground steel, as a function of the pressure

Shaft materials

Diagram 06 shows results of testing different shaft materials with plain bearings made from iglidur® F2.

In the lower region of the load, cutting steel and hard anodised aluminium shafts, as well as HR carbon steel and hard-chromed steel shafts prove to be the most favourable in rotating applications with iglidur® F2 plain bearings with respect to wear.

Diagram 07 shows a significantly less wear in rotation compared to pivoting movements over the entire load range.

► Shaft materials, page 52

iglidur® F2	Dry	Greases	Oil	Water
C. o. f. μ	0.16–0.22	0.1	0.05	0.03

Table 04: Coefficient of friction against steel ($R_a = 1\mu\text{m}$, 50 HRC)

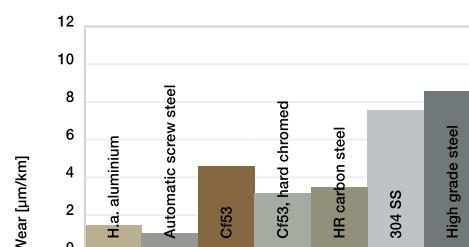

Diagram 06: Wear, rotating with different shaft materials, p = 1 MPa, v = 0.3 m/s

Installation tolerances

iglidur® H2 bearings are standard bearings for shafts with h-tolerance (recommended minimum h9). The bearings are designed for pressfit into a housing machined to a H7 tolerance.

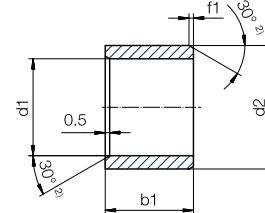

After being assembled into a nominal size housing, the inner diameter automatically adjusts to the E10 tolerances.
