

## The robust all-rounder according to DIN 2795 – iglidur® M250

Over 450 dimensions available from stock

Excellent vibration dampening

Resistant to edge loads

High impact resistance

Thick walled according to DIN 1850

Dirt can become embedded for shaft protection

Lubrication and maintenance-free

# iglidur® M250 | The robust all-rounder according to DIN 2795

## Excellent vibration dampening

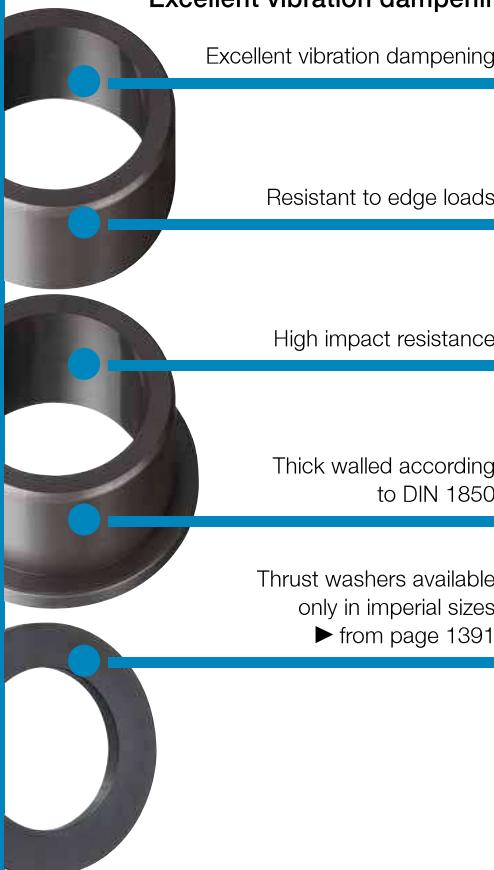

Excellent vibration dampening

Resistant to edge loads

High impact resistance

Thick walled according to DIN 1850

The self lubricating plain bearings made from iglidur® M250 are defined by their impact strength, vibration dampening, and wear resistant properties. They excel in applications in which vibration dampening is necessary, for example, in fitness and packaging machines.

### When to use it?

- When the bearings are exposed to high amounts of dirt
- When high vibration damping is necessary
- For low to medium speeds
- When mechanical reaming of the wall surface is necessary
- Resistant to edge loads
- High impact resistance
- Thick walled according to DIN 1850

### When not to use it?

- For applications in wet areas
  - iglidur® H, page 313
- When very high precision is necessary
  - iglidur® P, page 113
- For very smooth shafts
  - iglidur® J, page 141
- When a cost-effective wear resistant bearing is required
  - iglidur® R, page 221

### Typical application areas

- Agricultural machines
- Furniture/Industrial design
- Textile industry
- Doors and gates
- Machine building

# iglidur® M250 | Technical data

## Material properties

General properties	Unit	iglidur® M250	Testing method
Density	g/cm³	1.14	
Colour		charcoal	
Max. moisture absorption at +23 °C/50 % r.h.	% weight	1.4	DIN 53495
Max. water absorption	% weight	7.6	
Coefficient of sliding friction, dynamic, against steel	μ	0.18–0.40	
pv value, max. (dry)	MPa · m/s	0.12	
Mechanical properties			
Flexural modulus	MPa	2,700	DIN 53457
Flexural strength at +20 °C	MPa	112	DIN 53452
Compressive strength	MPa	52	
Max. recommended surface pressure (+20 °C)	MPa	20	
Shore-D hardness		79	DIN 53505
Physical and thermal properties			
Max. long-term application temperature	°C	+80	
Max. short-term application temperature	°C	+170	
Min. long-term application temperature	°C	-40	
Heat conductivity	W/m · K	0.24	ASTM C 177
Coefficient of thermal expansion (at +23 °C)	K⁻¹ · 10⁻⁵	10	DIN 53752
Electrical properties			
Specific contact resistance	Ωcm	> 10¹³	DIN IEC 93
Surface resistance	Ω	> 10¹¹	DIN 53482

Table 01: Material properties table

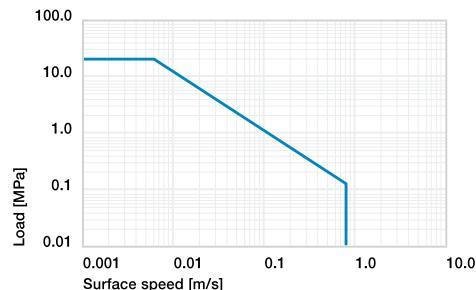

Diagram 01: Permissible pv values for iglidur® M250 bearings with a wall thickness of 1 mm dry running against a steel shaft, at +20 °C, mounted in a steel housing

### Moisture absorption

The humidity absorption of iglidur® M250 bearings amounts to about 1.4 % weight in standard climatic conditions. The saturation limit in water is 7.6 % weight. This must be taken into account for these types of applications.

► Diagram, [www.igus.eu/m250-moisture](http://www.igus.eu/m250-moisture)

### Vacuum

iglidur® M250 plain bearings outgas in a vacuum. The relatively high moisture absorption of the bearing allows only limited use in vacuum.

### Radiation resistance

Plain bearings made from iglidur® M250 have limited use under radioactive radiation. They are resistant up to a radiation intensity of  $1 \cdot 10^4$  Gy.

### UV resistance

iglidur® M250 plain bearings are permanently resistant to UV radiation.

Medium	Resistance
Alcohol	+ to 0
Hydrocarbons	+
Greases, oils without additives	+
Fuels	+
Diluted acids	0 to –
Strong acids	–
Diluted alkalines	+
Strong alkalines	0

+ resistant 0 conditionally resistant – not resistant

# iglidur® M250 | Technical data

The self lubricating plain bearings made from iglidur® M250 are defined by their impact strength, vibration dampening, and wear resistant properties. They excel in applications in which vibration dampening is necessary, for example, in fitness and packaging machines. Since they are additionally able to absorb dirt, they are also suited for agricultural machines and garden appliances.

## Mechanical properties

With increasing temperatures, the compressive strength of iglidur® M250 plain bearings decreases. Diagram 02 clarifies this relationship. The permissible maximum surface pressure is a mechanical material parameter. No conclusions regarding the tribological properties can be drawn from this.

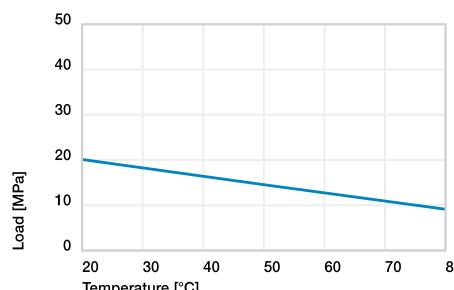

Diagram 02: Permissible maximum surface pressure of as a function of temperature (20 MPa at +20°C)

iglidur® M250 bearings can withstand radial loads of a maximum 20 MPa. Compared with other iglidur® materials iglidur® M250 bearings are highly elastic. A plastic deformation is minimal up to the permissible surface pressure. A plastic deformation is minimal up to the permissible surface pressure.

## ► Surface pressure, page 41

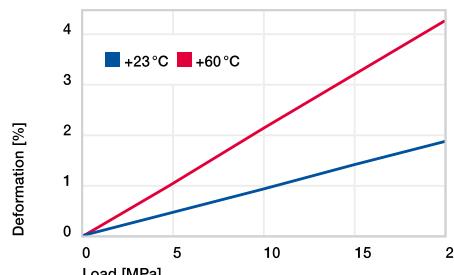

Diagram 03: Deformation under pressure and temperature

## Permissible surface speeds

As standard, iglidur® M250 is manufactured as a thick walled bearing. iglidur® M250 is best suited for low to medium surface speeds. The maximum permissible speed for dry running applications is 0.8 m/s (rotating) or 2.5 m/s (linear). In practice, though, this temperature level is rarely reached due to varying application conditions.

## ► Surface speed, page 44

m/s	Rotating	Oscillating	Linear
Continuous	0.8	0.6	2.5
Short-term	2	1.4	5

Table 03: Maximum surface speeds

## Temperatures

The maximum permissible short-term temperature is +170°C. However iglidur® M250 plain bearings may only be exposed to this temperature without any additional load. The long-term permissible application temperature is +80°C. This is also the point of the wear limit, i.e. the temperature over which the wear increases exponentially. At temperatures over +60°C an additional securing is required.

- Application temperatures, page 49
- Additional securing, page 49

## Friction and wear

The coefficient of friction  $\mu$  of a plain bearing among other factors is influenced by the surface speed and the load (diagrams 04 and 05).

- Coefficients of friction and surfaces, page 47
- Wear resistance, page 50

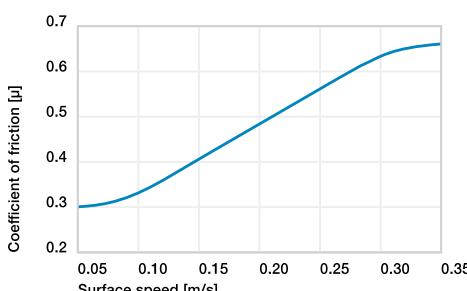

Diagram 04: Coefficient of friction as a function of the surface speed,  $p = 0.75$  MPa

# iglidur® M250 | Technical data

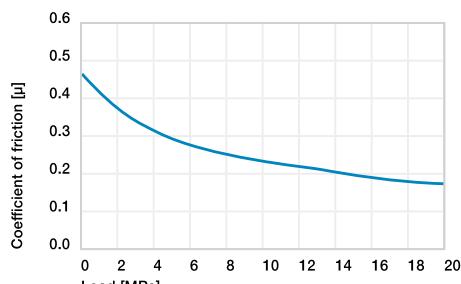

Diagram 05: Coefficient of friction as a function of the pressure,  $v = 0.01$  m/s

## Shaft materials

Friction and wear also depend to a high degree on the reverse partner. If you observe the coefficient of friction, then the ideal shaft surface finish for iglidur® M250 bearings is  $R_a = 0.6$  mm. Diagrams 06 and 07 show results of testing different shaft materials with plain bearings made of iglidur® M250. Up to loads of 2 MPa the shaft material plays a relatively small role for rotational movements. Therefore, a suitable shaft material must be considered for higher loads. These are hardened shafts, such as cold-rolled steel or hard chromed shafts. Diagram 07 makes it clear that iglidur® M250 is considerably better for rotational than for oscillating operation. However, it must be mentioned that in oscillating movements, often the vibrations acting on the bearing are especially high. Here, iglidur® M250 can utilise its special dampening properties. In our test, these vibrations are excluded so that the comparison between rotation and oscillating operation is captured first.

## ► Shaft materials, page 52

iglidur® M250	Dry	Greases	Oil	Water
C. o. f. $\mu$	0.18–0.40	0.09	0.04	0.04

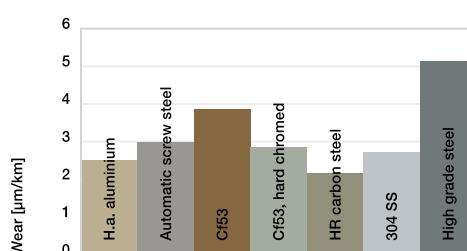

Diagram 06: Wear, rotating with different shaft materials, pressure,  $p = 1$  MPa,  $v = 0.3$  m/s

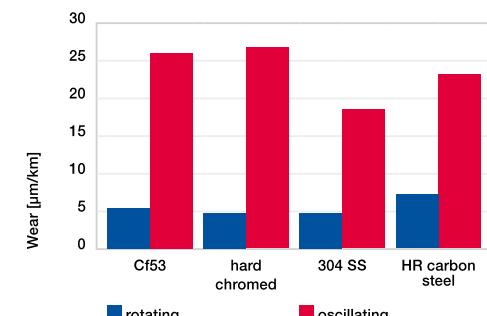

Diagram 07: Wear for rotating and oscillating applications with different shaft materials,  $p = 2$  MPa

## Installation tolerances

iglidur® M250 plain bearings require a relatively large amount of clearance for optimal operation. This ensures that the bearing remains reliable during temperature change and water absorption. The disadvantages of the bearings clearance are minimised by the vibration dampening properties. The bearings are designed for press-fit into a housing machined to a H7 tolerance. After being assembled into a nominal size housing, in standard cases the inner diameter automatically adjusts to the D11 tolerances. For particular dimensions the tolerance differs depending on the wall thickness (please see product range table). The shaft should have a recommended minimum h9 tolerance.

- Specialist for pivoting, rolling applications and more – iglidur® P210**
- Low moisture absorption**
- Extremely wear resistant especially up to 20 MPa in pivoting applications**
- Versatile: performance on many different shafts**
- Good with edge loads**
- Lubrication and maintenance-free**
- Standard range from stock**
