3D Product Configurator for Modular Tooling Systems

Dr. Jochen Bahnmüller

asim
IT WORKS FOR YOU

CAD PART
SOLUTIONS

WOHLHAUPTER
Für Ihren Erfolg.

- 1 Background and objectives
- 2 Modular tooling system (configurations, components)
- 3 Requirements, design and integration in the IT environment
- 4 Implementation of the PIM-based ToolArchitect
- 5 Configuration using the ToolArchitect - examples
- 6 Status of the project and the next steps

1. Background and Objectives

1.2 Requirements to a Product Configurator - Specifications

- MultiBore: High quality tools for precision boring operations
 - Over 3000 components lead to more than 300.000 solutions
 - Sometimes more than 10 interfaces in a tool setup
 - Different types, sizes and multiple Interfaces
 - Not every setup that fits, results in a sound application
 - The configuration of tools by means of a catalog is confusing and time consuming
-
- ▶ Sales partners have special knowledge about tools and machining technology
 - ▶ The special knowledge about the best combination of Wohlhaupter MultiBore tools and their specific interfaces is typically missing.

2. Modular Tooling System

2.1 Components and Tooling Kits of Digital Precision Boring Tools

Single Components

Tooling Sets

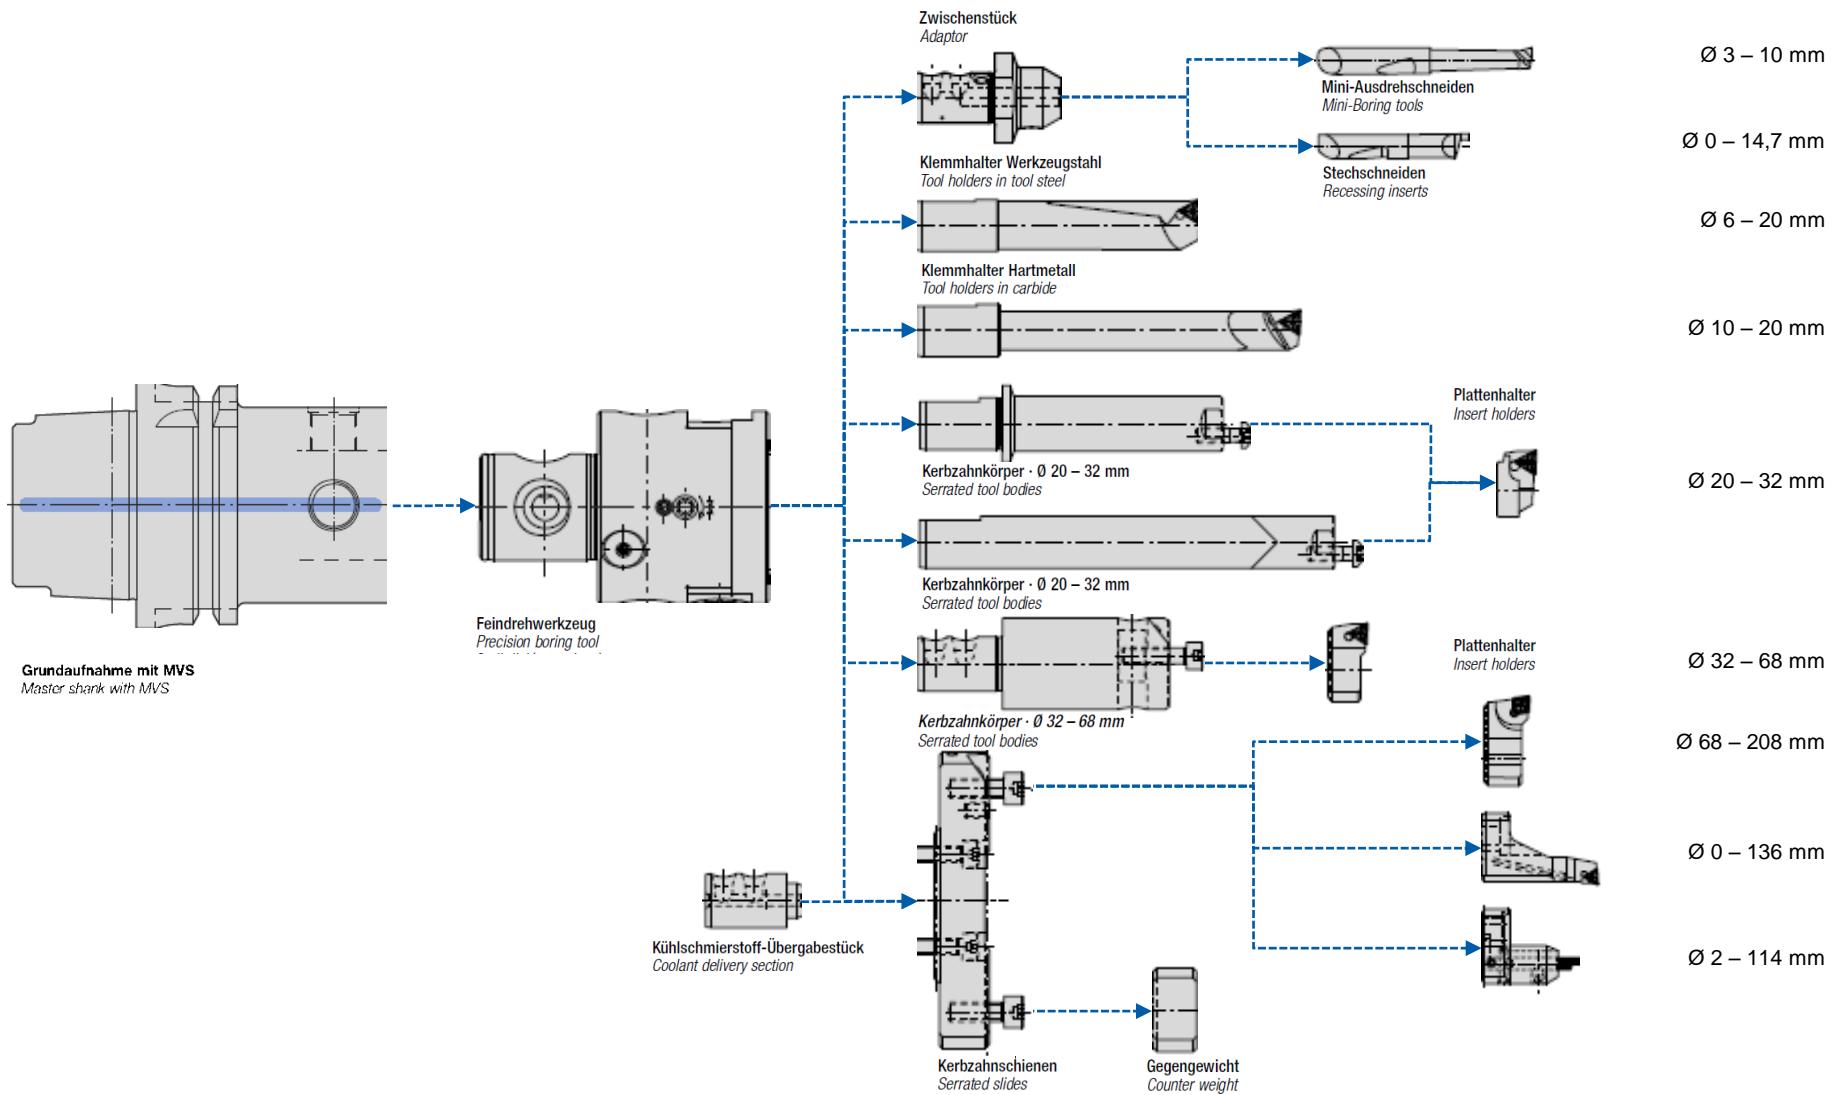

Tooling System

The search engine of the ToolArchitect should work, even if you are looking for a component, a tooling set or a complete setup of a tooling system.

2. Modular Tooling System

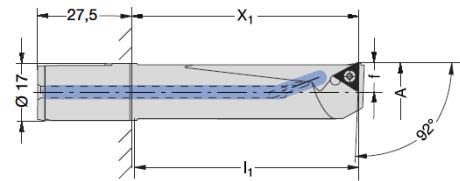

2.2 Components and Tooling Kits of Digital Precision Boring Tools (Family 501)

2. Modular Tooling System

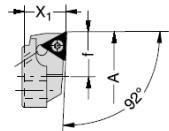

2.2 Components of Digital Precision Boring Tools (Family 501) – Variants of Components

Klemmhalter aus Werkzeugstahl
Einstellwinkel 92°, Ø 6 – 20 mm

Tool holder in tool steel with 92°
approach angle, Ø 6 – 20 mm

Plattenhalter
mit Einstellwinkel 92°

Insert holder
with 92° approach angle

3. Requirements, Conception and Integration in the IT-Environment

3.1 Requirements to the ToolArchitect - Specification

- Optimal support in **finding a best practice solution**
- **High-end-visualization** for a high-end-product
- Support for the **workflow** in the whole **sales process**
- Numerous data **exports for the User** (CAM, tool management, ...)
- **Avoiding multiple data records** of the same product (efficiency, data integrity)
- Easy product **data administration** for **revisions** and **launches** of products ...
- The publishing of **online** and **print catalogues** (Step 2)
- Providing a **database** for **applications** and **tooling parameters** (Step 2)

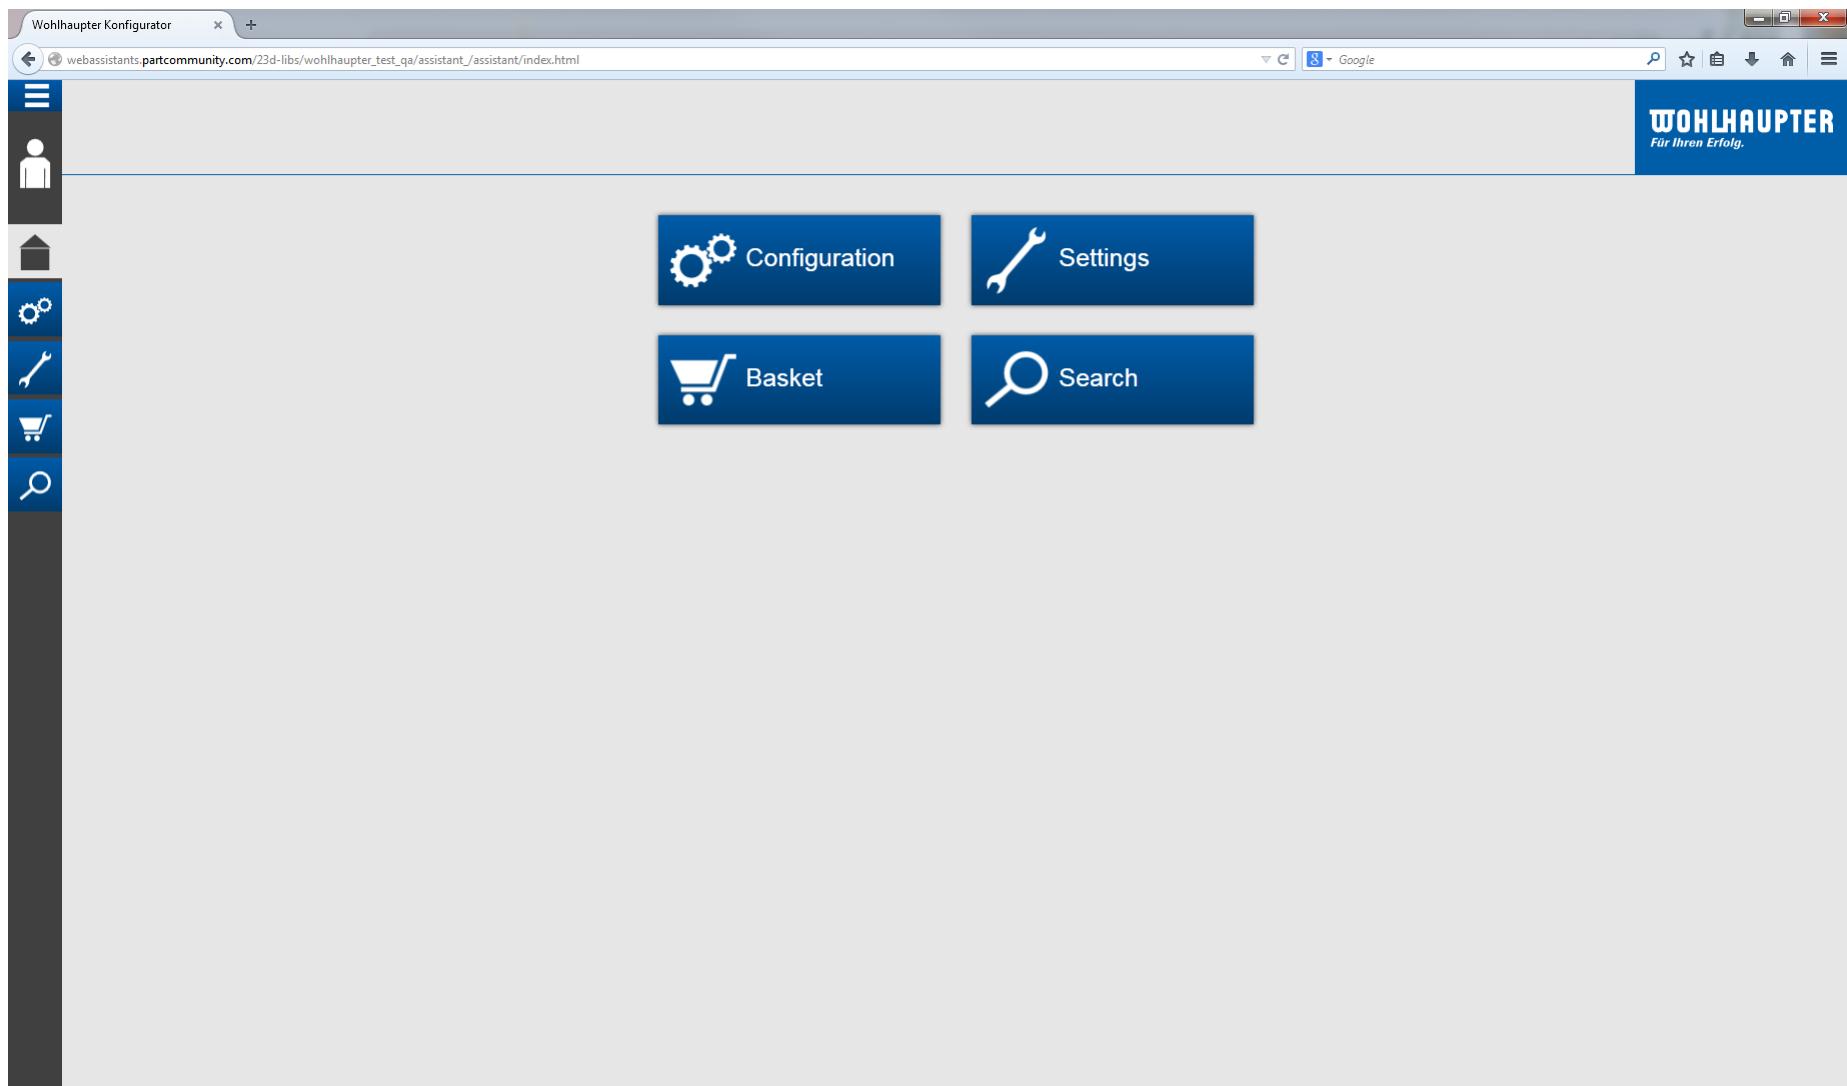

4. Implementation of the PIM-Based ToolArchitect

4.1 IT Systems: Flow Chart, Interfaces, Input und Output

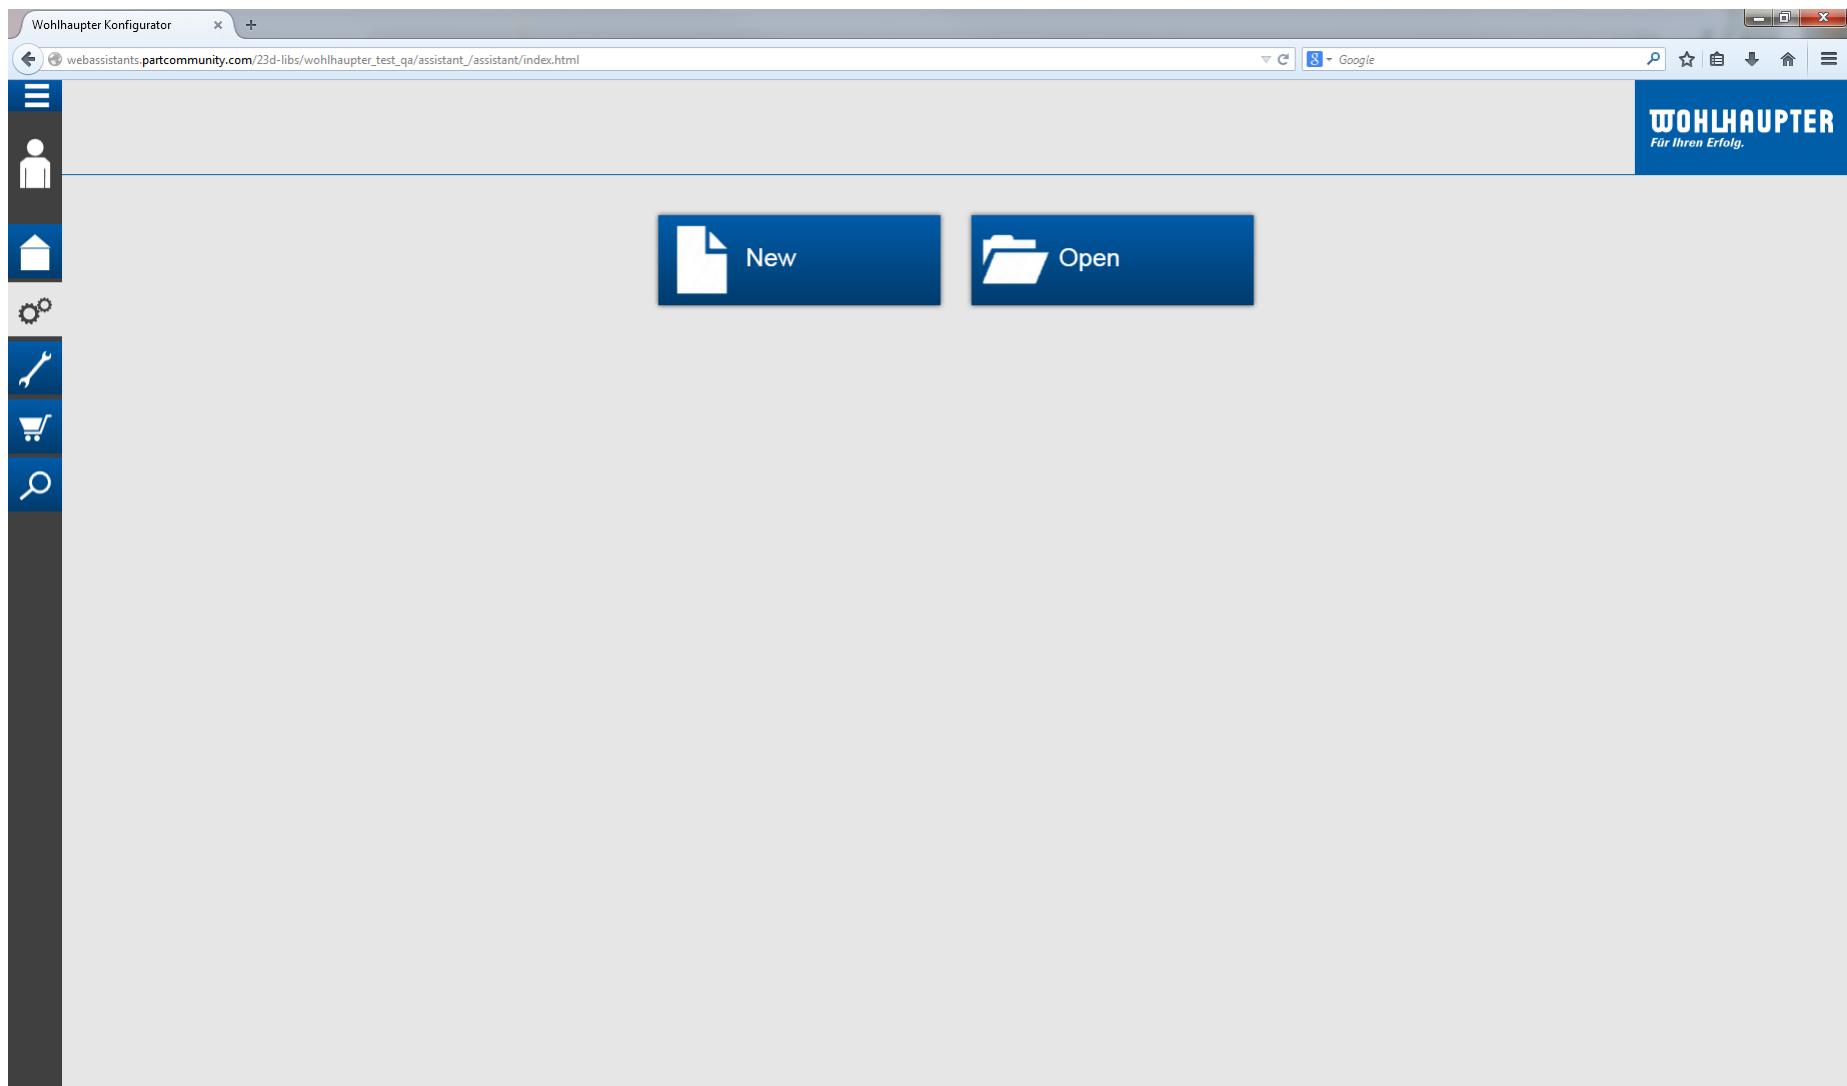

5. Configuration Using the ToolArchitect - Examples

5.1 Starting Configuration Mode

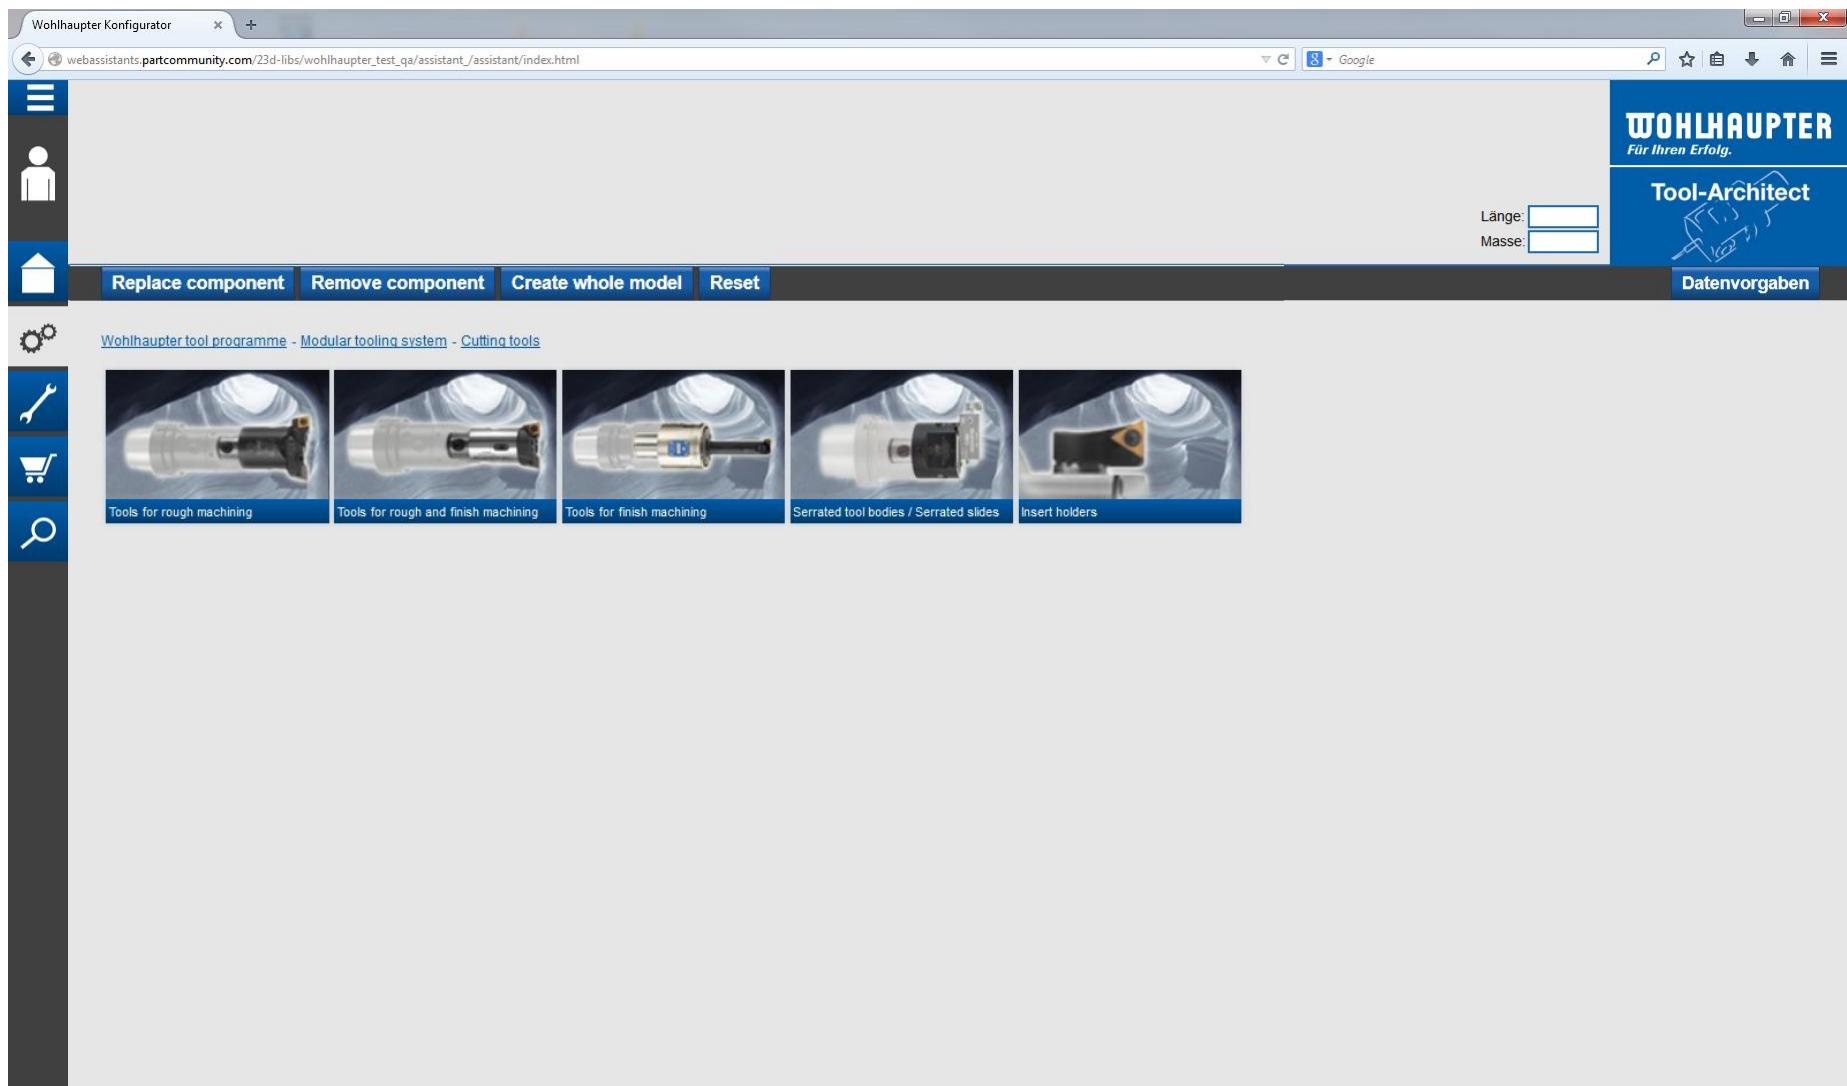

5. Configuration Using the ToolArchitect - Examples

5.1 Starting Configuration Mode (new or already existing setup)

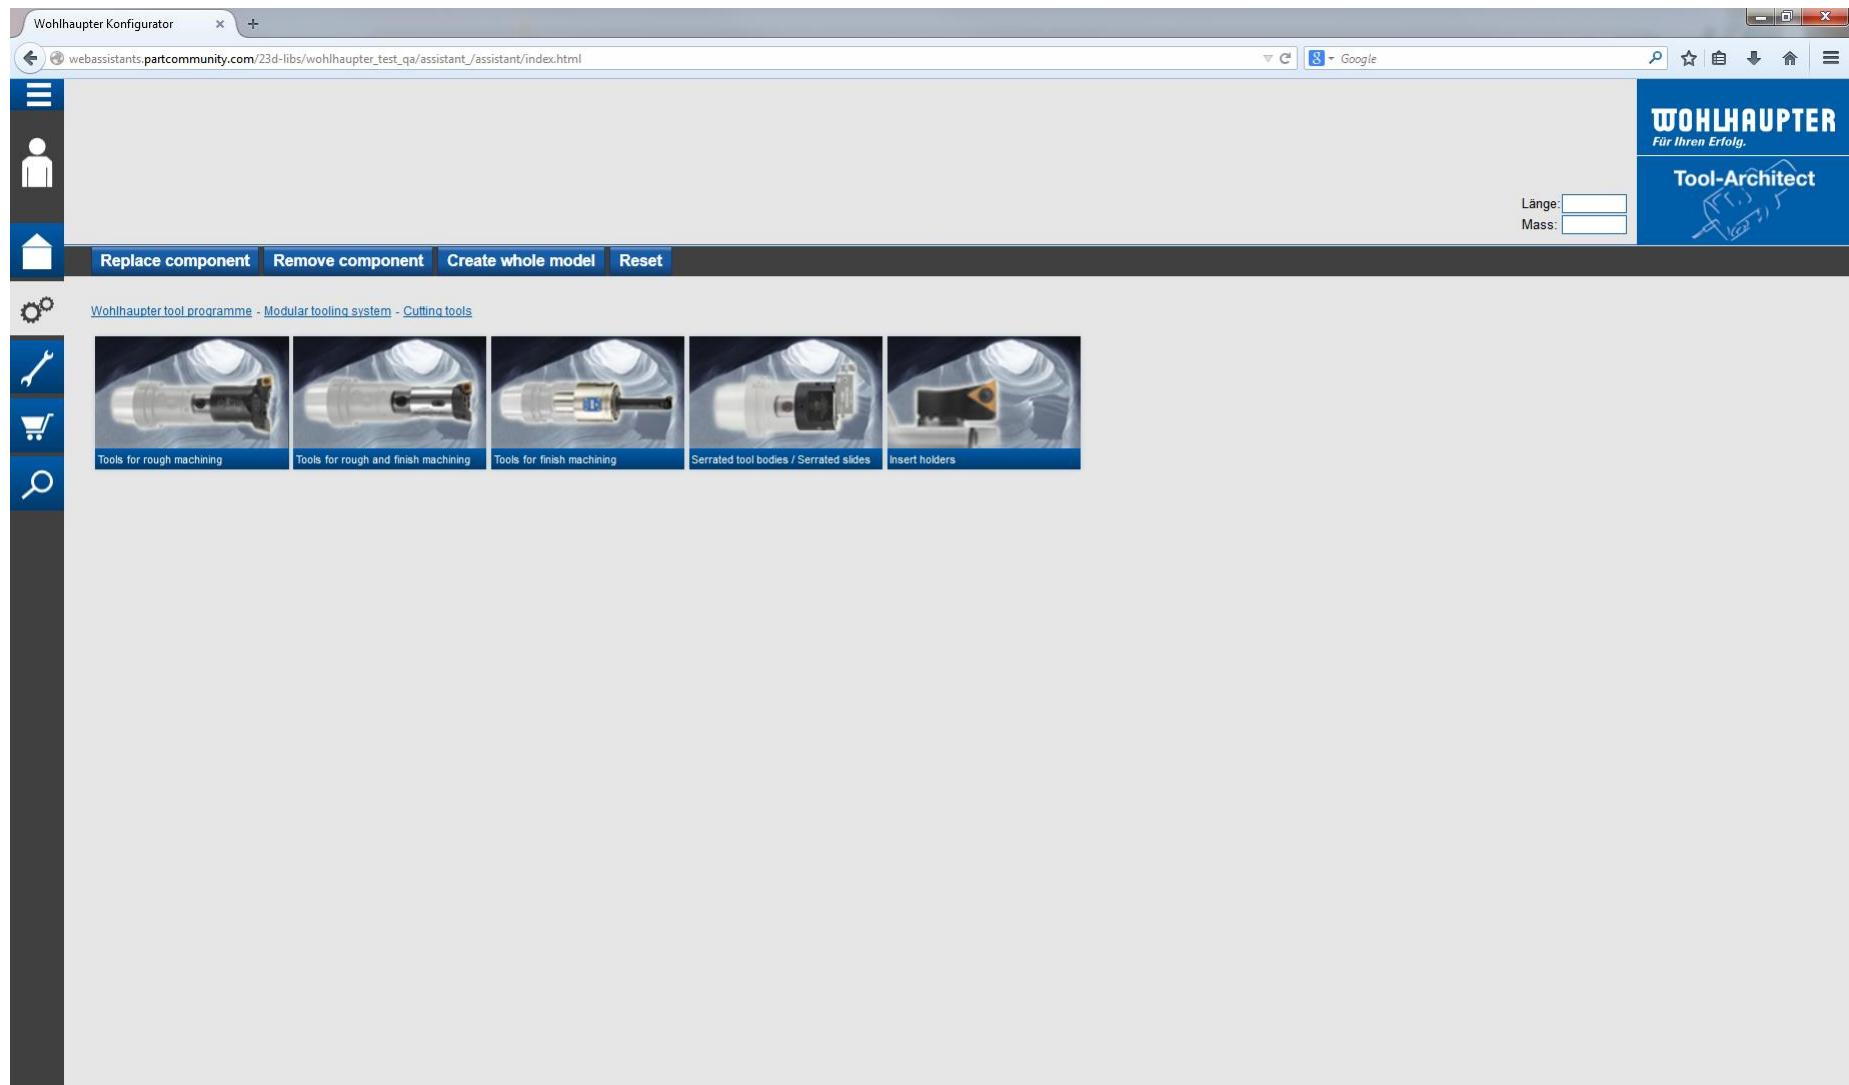

5. Configuration Using the ToolArchitect - Examples

5.2 Selection of the Boring Tool

5. Configuration Using the ToolArchitect - Examples

5.2 Selection of the Boring Tool

5. Configuration Using the ToolArchitect - Examples

5.2 Selection of the Boring Tool

The screenshot shows the Wohlhaupter Konfigurator software interface. At the top, there is a navigation bar with tabs: "Komponente ersetzen", "Komponente entfernen", "Gesamtmodell erzeugen", "Alles zurücksetzen", and "Datenvorgaben". On the right side, there are input fields for "Länge" (Length) and "Masse" (Mass). The main area displays a table of tool data with the following columns:

DXF Bild	Bestell-Nr.	Bezeichnung	MVS-Verbindungsstelle	MVS-Verbindungsstelle X1	Schnittstelle	Ausdrehbereich	Hubst mit Plattenhalter	Ausdrehwerkzeuge		masch.	Bestell-Nr.	Aufnahme	min.	max.	Durchm.	Durchm.	Prog.-Mass	max.	Drehzahl	Ausf.	Werkstoff	Gewicht	Start	Stabilitätsfaktor	Bild-Datei	DXF-Datei

Bemessung

The technical drawing shows a cross-section of the master shank. Dimension D is the outer diameter of the shank. Dimension X1 is the distance from the center of the shank to the center of the shoulder. Dimension L1 is the length of the shoulder. Dimension D3 is the diameter of the shoulder. Dimension D4 is the diameter of the hole in the shank. A red dashed line indicates the axis of rotation.

A 3D perspective view of the master shank, showing its cylindrical shape and the shoulder feature. Below the 3D model is a row of small icons for navigating through the CAD data.

5.4 Shopping Cart

The screenshot shows a web-based configuration tool interface for Wohlhaupter tools. The top navigation bar includes the title "Wohlhaupter Konfigurator" and the URL "webassistants.partcommunity.com/23d-libs/wohlhaupter_test_qa/assistant/_assistant/index.html". The right side features the Wohlhaupter logo with the tagline "Für Ihren Erfolg.". On the left, a vertical sidebar menu lists icons for user profile, dashboard, settings, tools, shopping cart, and search. The main content area displays a configuration titled "Konfiguration öffnen" for part number "501_KH_WSP_ok". The configuration table lists five items:

Best.-Nr.	Bezeichnung
119065	Verlängerung balanced
245013	Grundaufnahme balanced
501001	Feindrehwerkzeug DigiBore
502027	Klemmhalter
-	Form 20

On the far right of the configuration table are icons for a shopping cart, a clipboard, and a trash can.

6. Status of the Project and the Next Steps

- Optimal support in **finding a best practice solution application specific solution** in Step 2
- High-end-visualization** for high-end-product completed (To do: some error corrections in models)
- Support for the workflow in the whole sales process solved** (realization in progress)
- Numerous exports for the User (CAM, tool management, ...)**' only DIN 4003 is an open issue
- Preventing of multiple data records of the same product (efficiency, data integrity)** realization in part solution doesn't yet suit to the concept
- Easy product data administration for revisions and launches of products** realization in part solution doesn't yet suit to the concept
- The publishing of online- and print catalogues (Step 2)**
- Providing a database for applications and tooling parameters (Step 2)**
