Siemens Digital Industries Software
PreSales & Business Development

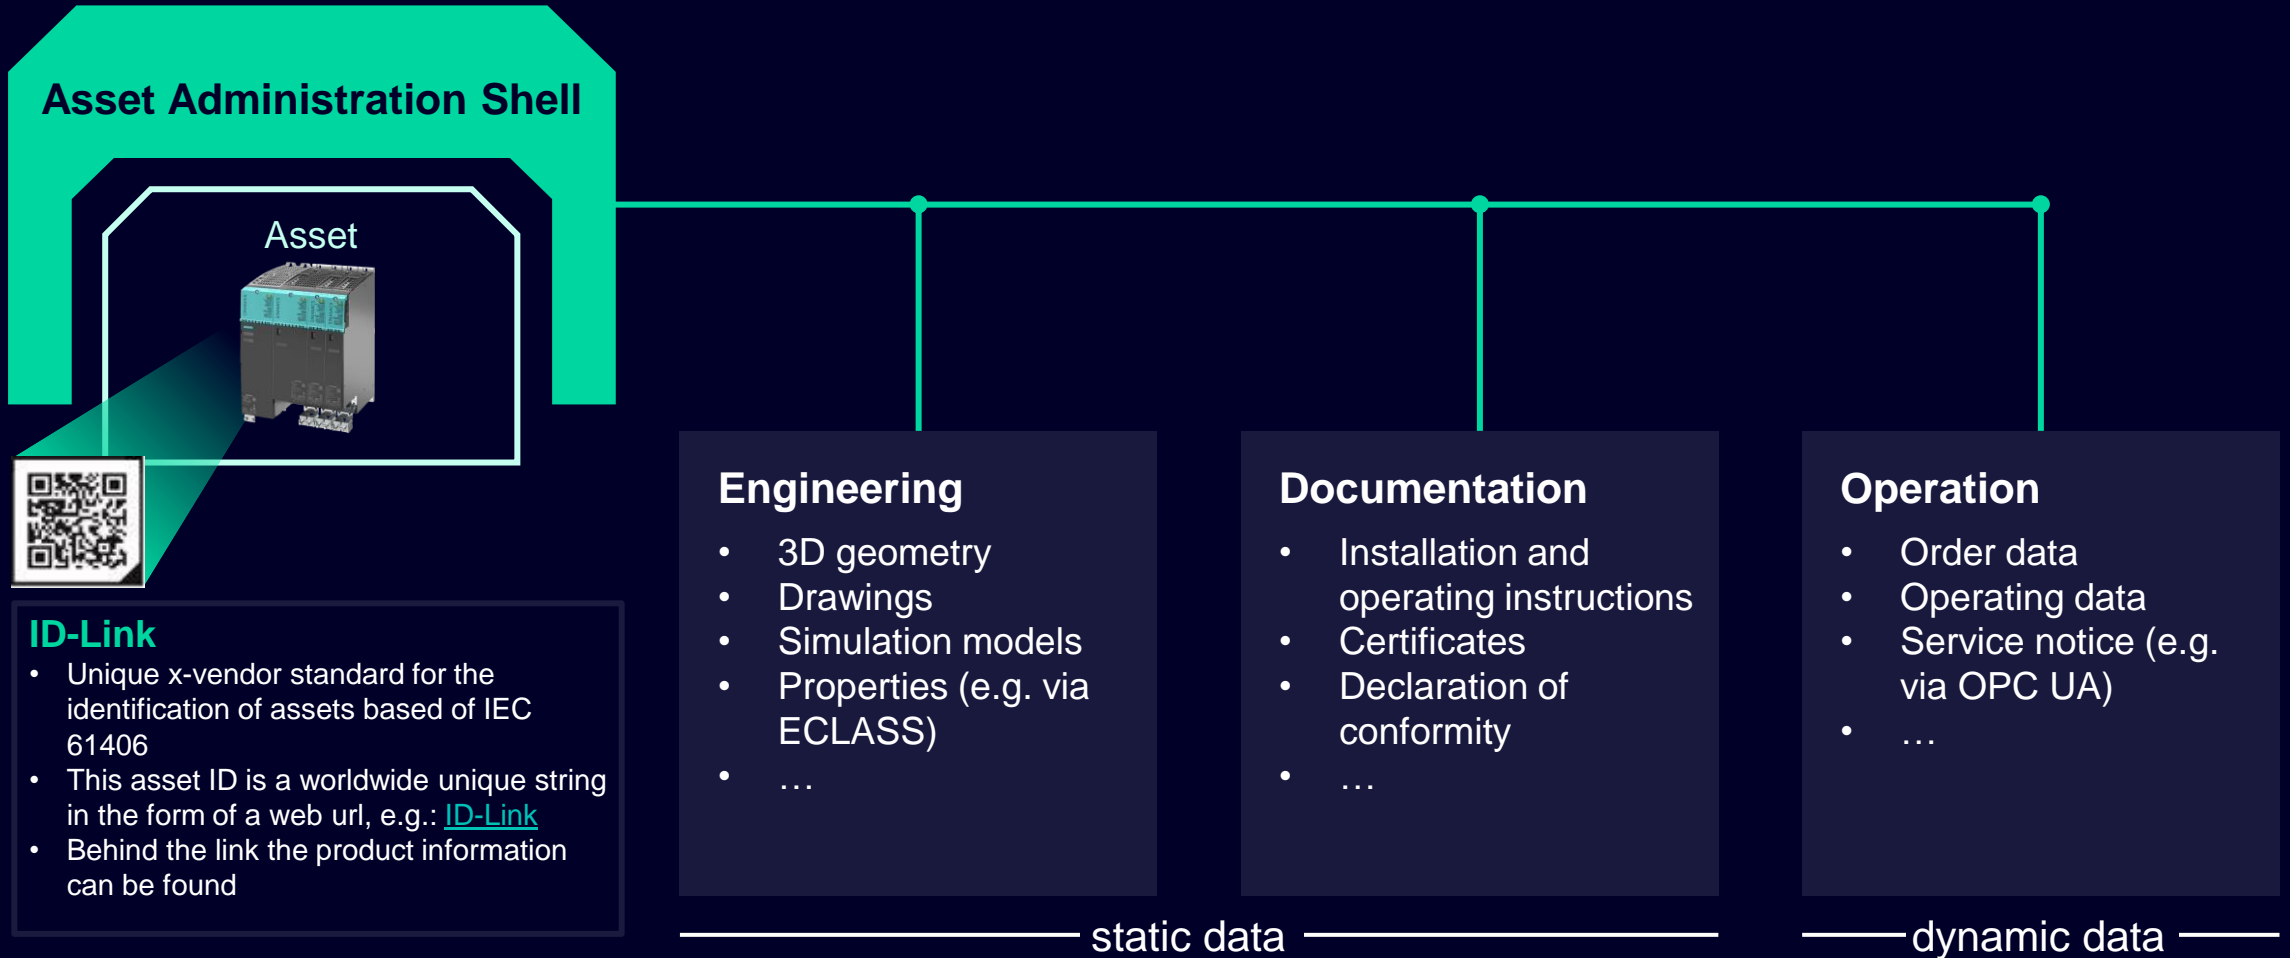

Introduction AAS

Evolution of component data support

Introduction AAS

What is the content of an Asset Administration Shell?

Cross-company AAS Use Case

Bausch+Ströbel labeling machine with different components

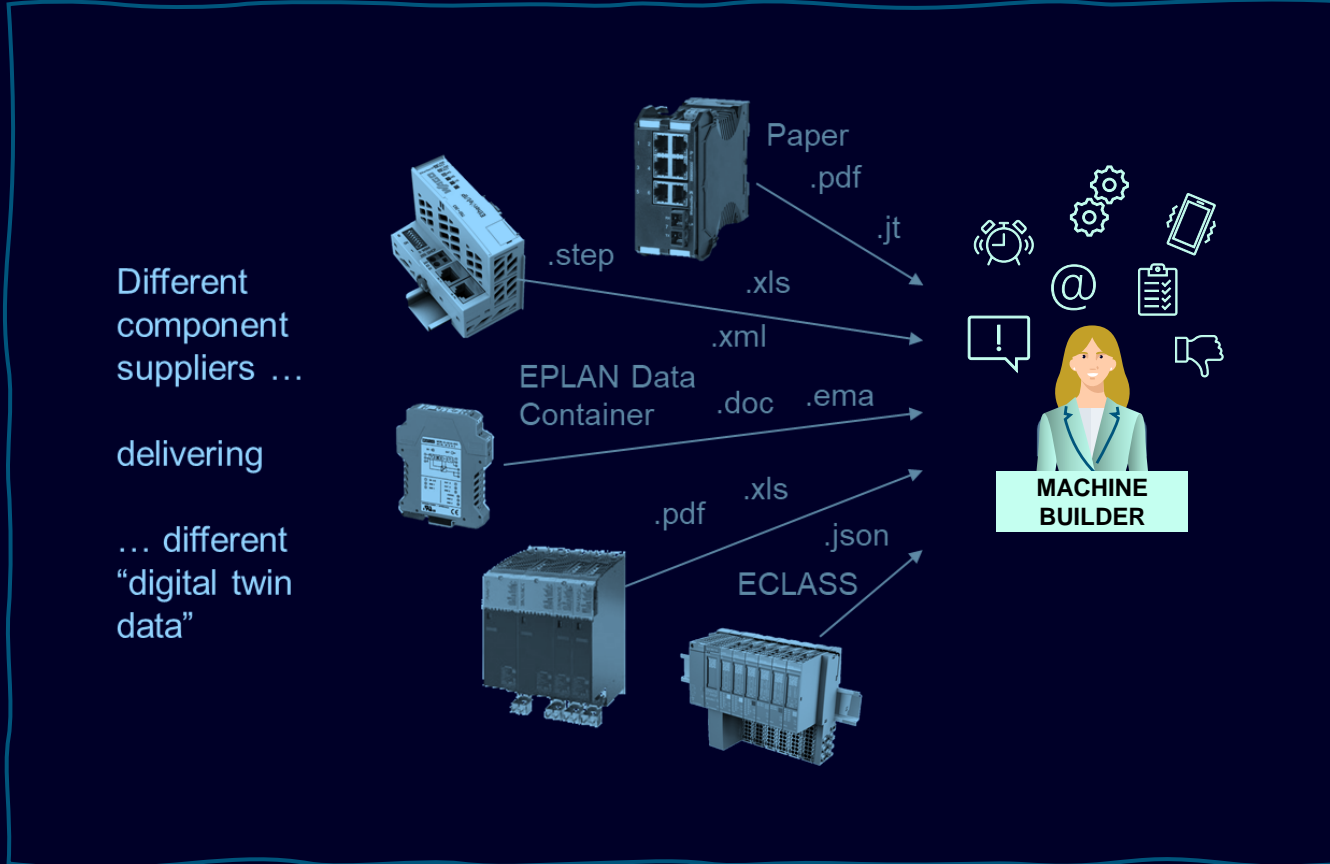

Pushing Performance
Since 1945

Cross-company AAS Use Case - Problem statement

“High manual effort required to exchange, search and integrate component data”

“Missing Interoperability leads to ...

- inefficient exchange**
- time consuming identification**
- high effort in structuring & completion**
- lacking quality**

... of digital twin data”

Cross-company AAS use case - Solution

Interoperable Digital Twin Data provided through PLM

Generic customer problem statement

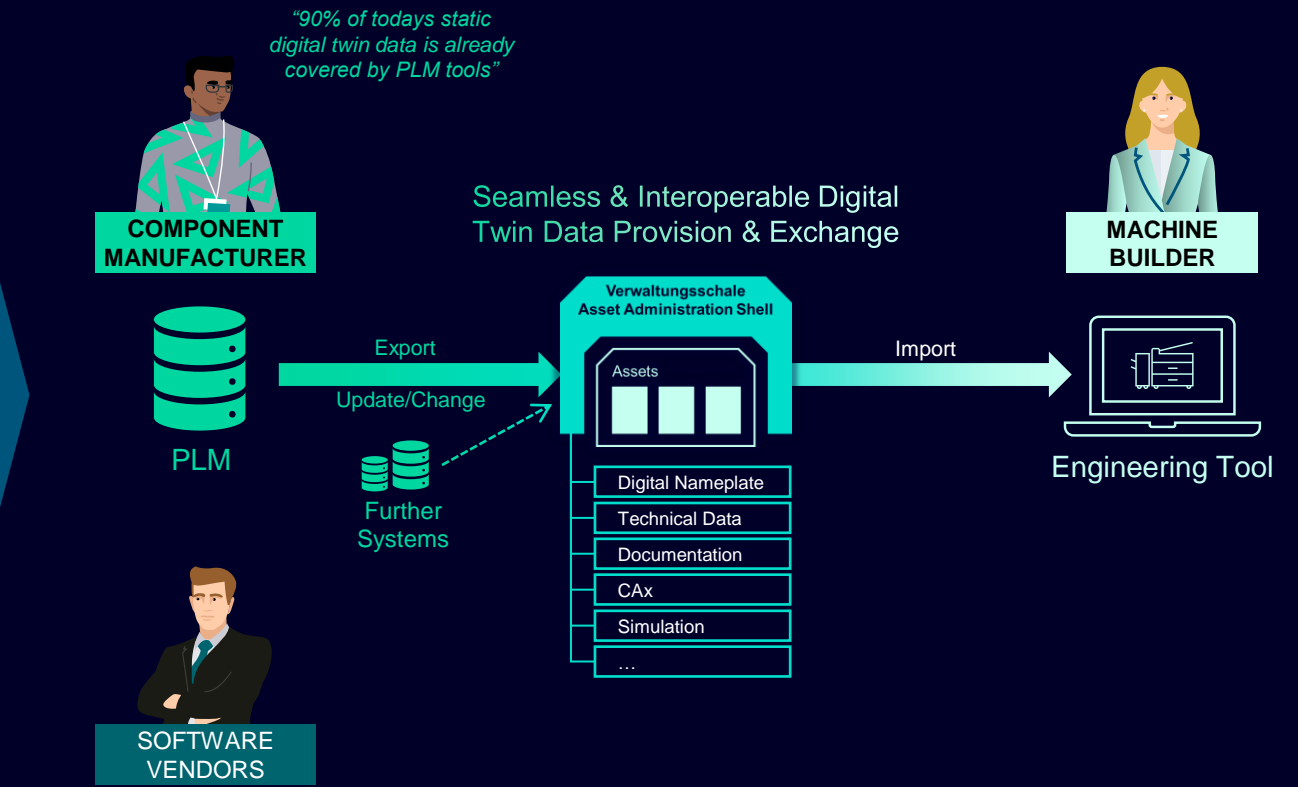

“Missing Interoperability leads to ...

- inefficient exchange**
- time consuming identification**
- high effort in structuring & completion**
- lacking quality**

... of digital twin data”

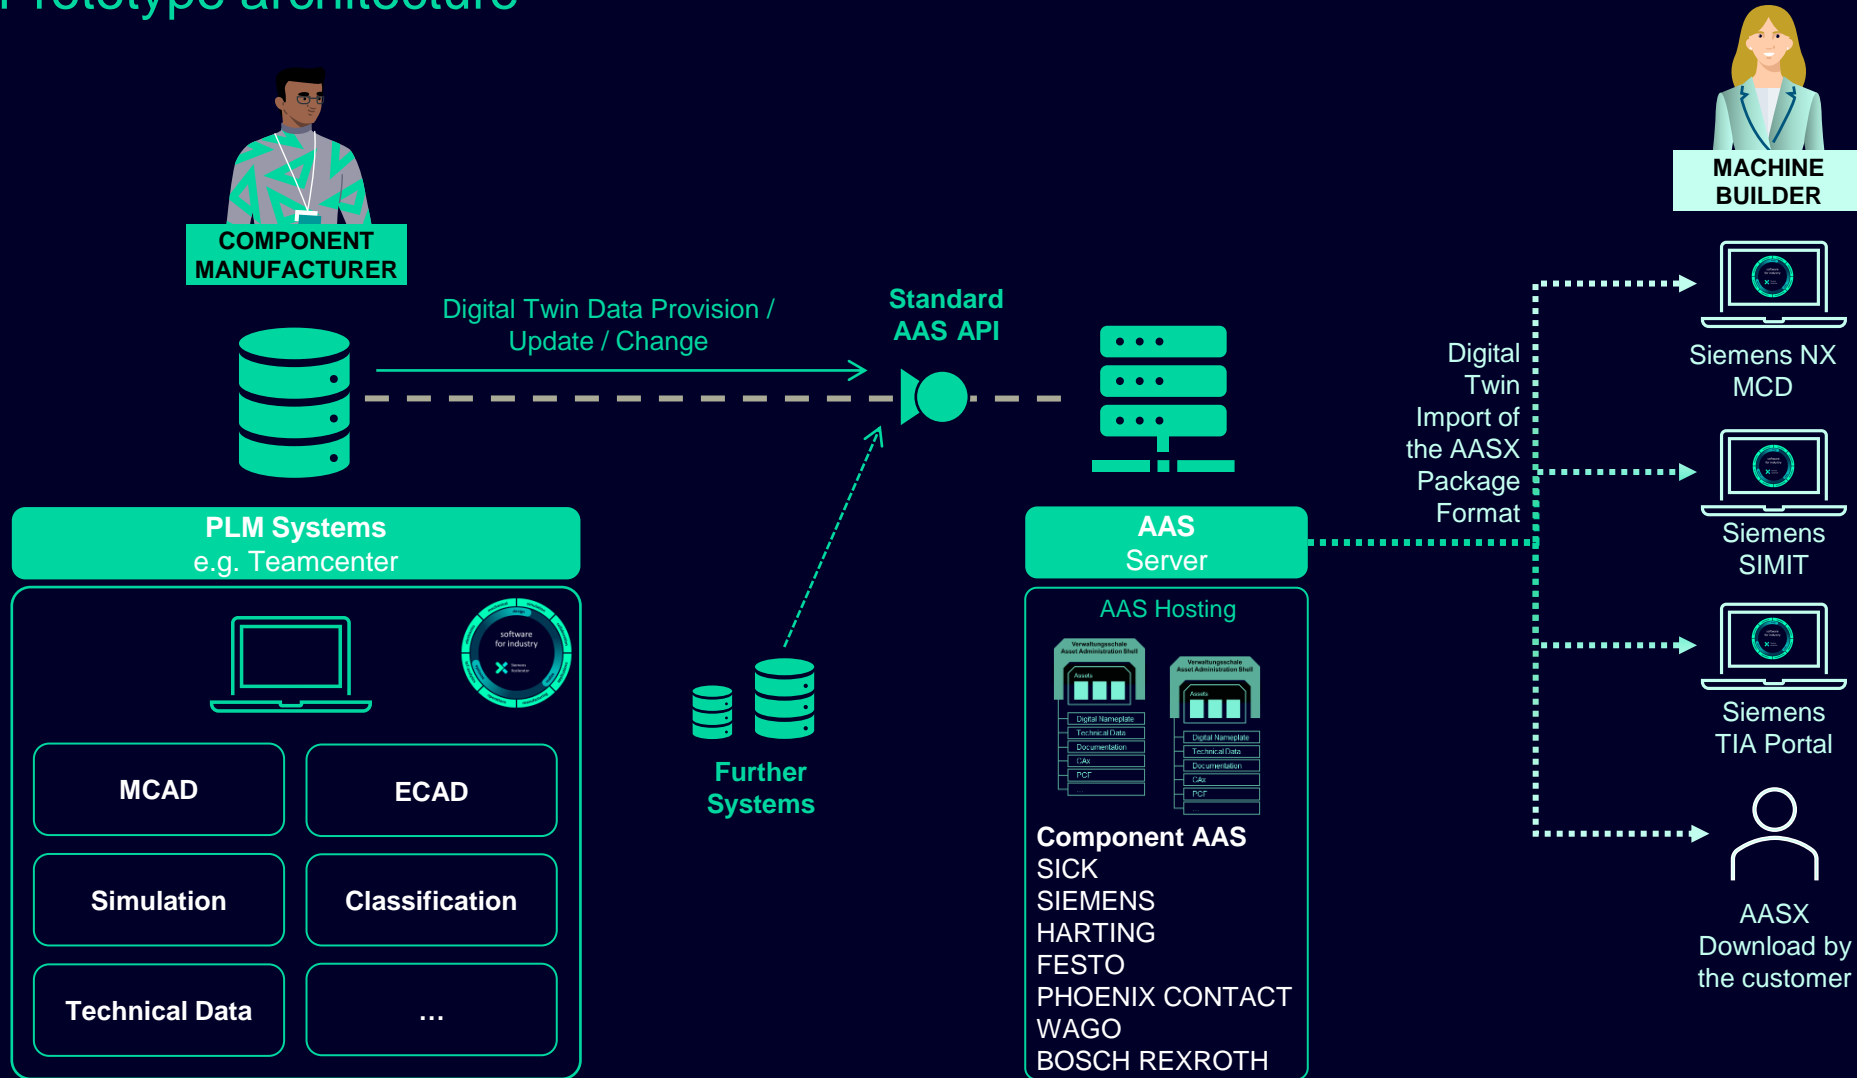

Proposed solution utilizing AAS (illustrative)

Interoperable Digital Twins

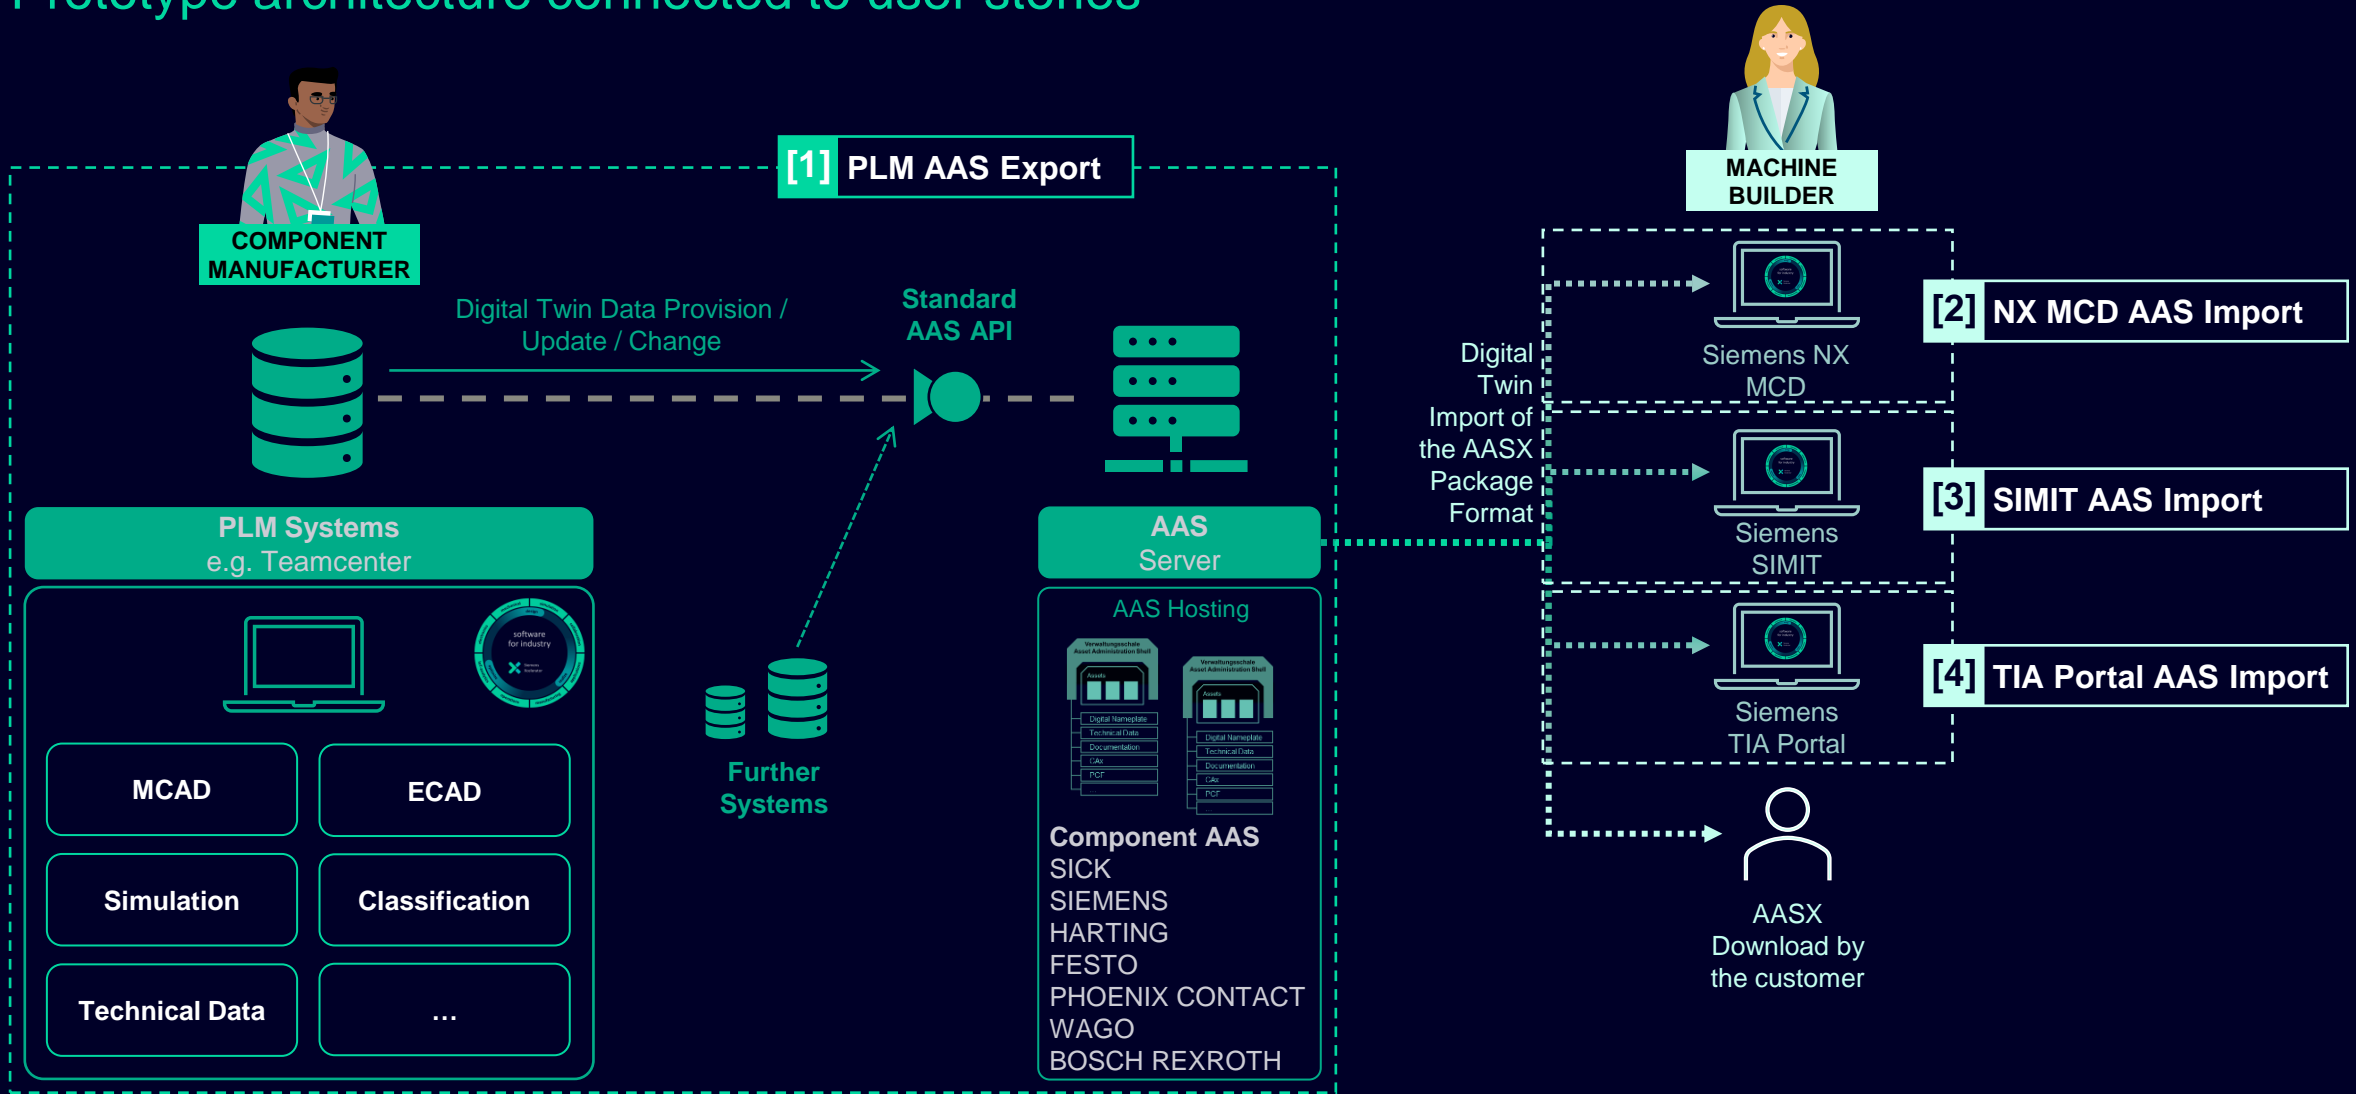

Cross-company AAS use case

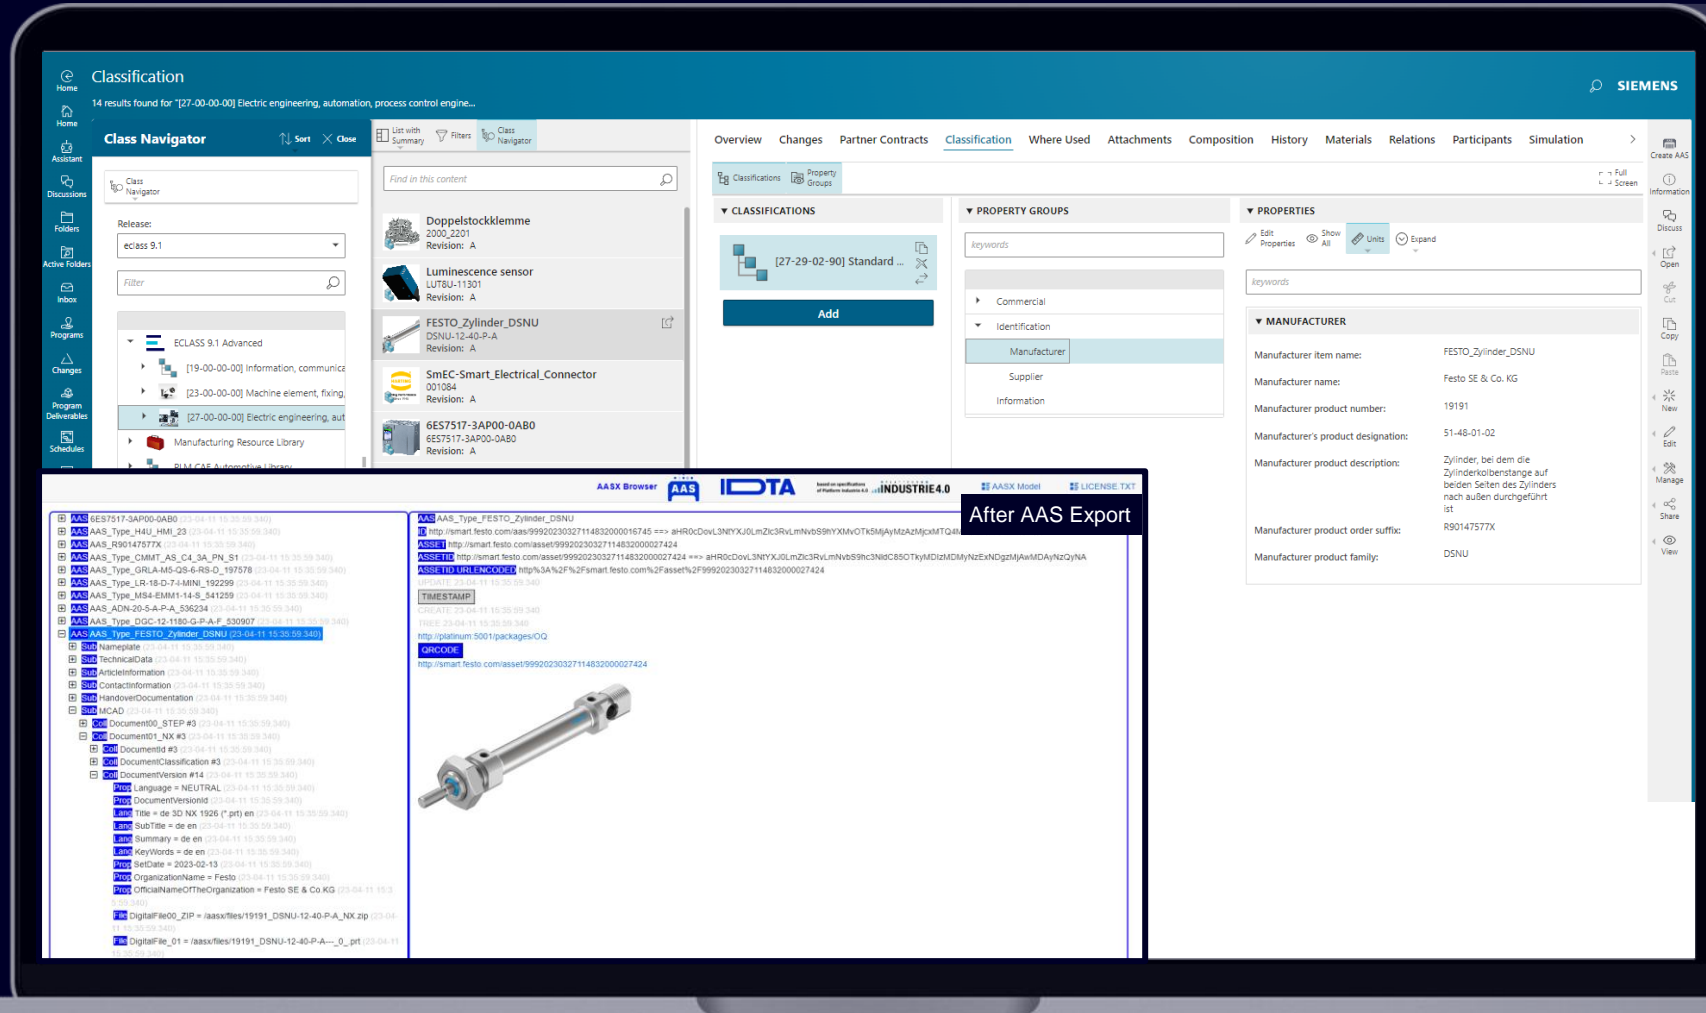

Prototype architecture

Cross-company AAS use case

Prototype architecture connected to user stories

VALUE PROPOSITION

- Time savings through easy digital twin data provision
- Reduction of data silos PLM as single source of truth for all digital twin
- Long term availability for all valuable design knowledge

VALUE PROPOSITION

- **Time savings** through automatic import ensuring always the right model and easy updating
- **Full kinematic models** for efficient design and validation of motions
- **Extended traceability** by linkage to digital twin in different authoring systems

VALUE PROPOSITION

- **Fast find & retrieval** of consistent simulation models for components
- **Easy composition** of specific machine simulation models
- **Use of standard formats** for efficient workflows for virtual commissioning and simulation

[4] TIA Portal AAS Import

VALUE PROPOSITION

- **Quick integration** of intelligent components with device files, function blocks, user dialogues, ...
- **Extended functionality** without programming by using predefined functions
- **Automatic code generation** possible by availability of BOM

RESULT

Bausch+Ströbel labeling machine with intelligent components

AAS Intro

Use Case

Benefits & Chances

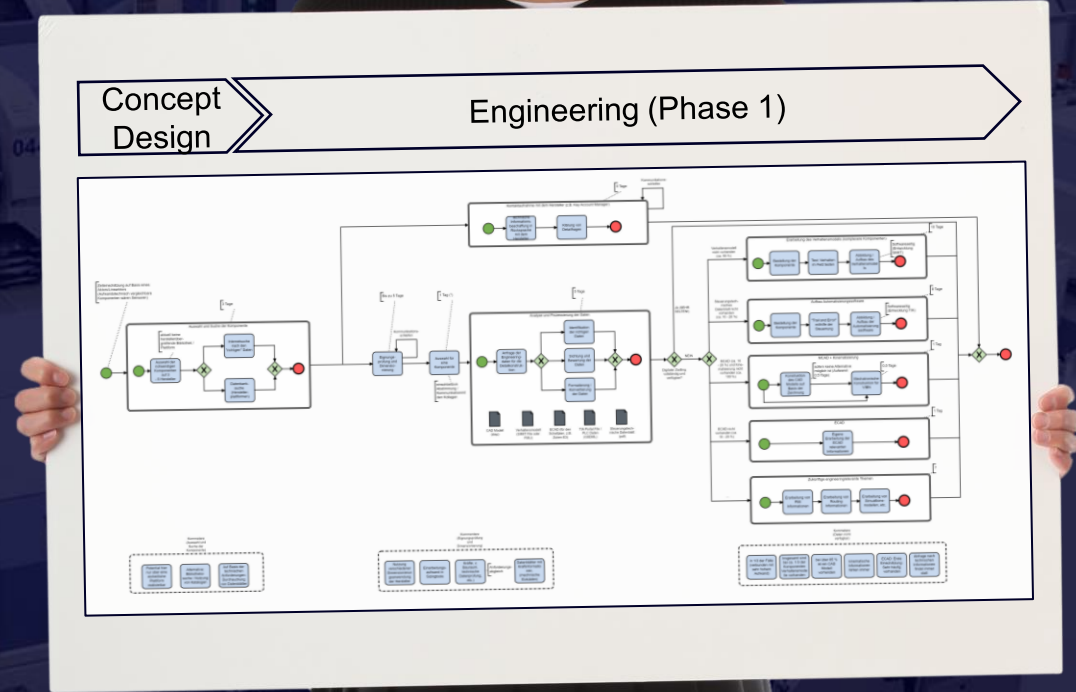

Key Takeaways

Benefits of the AAS within the customer use case

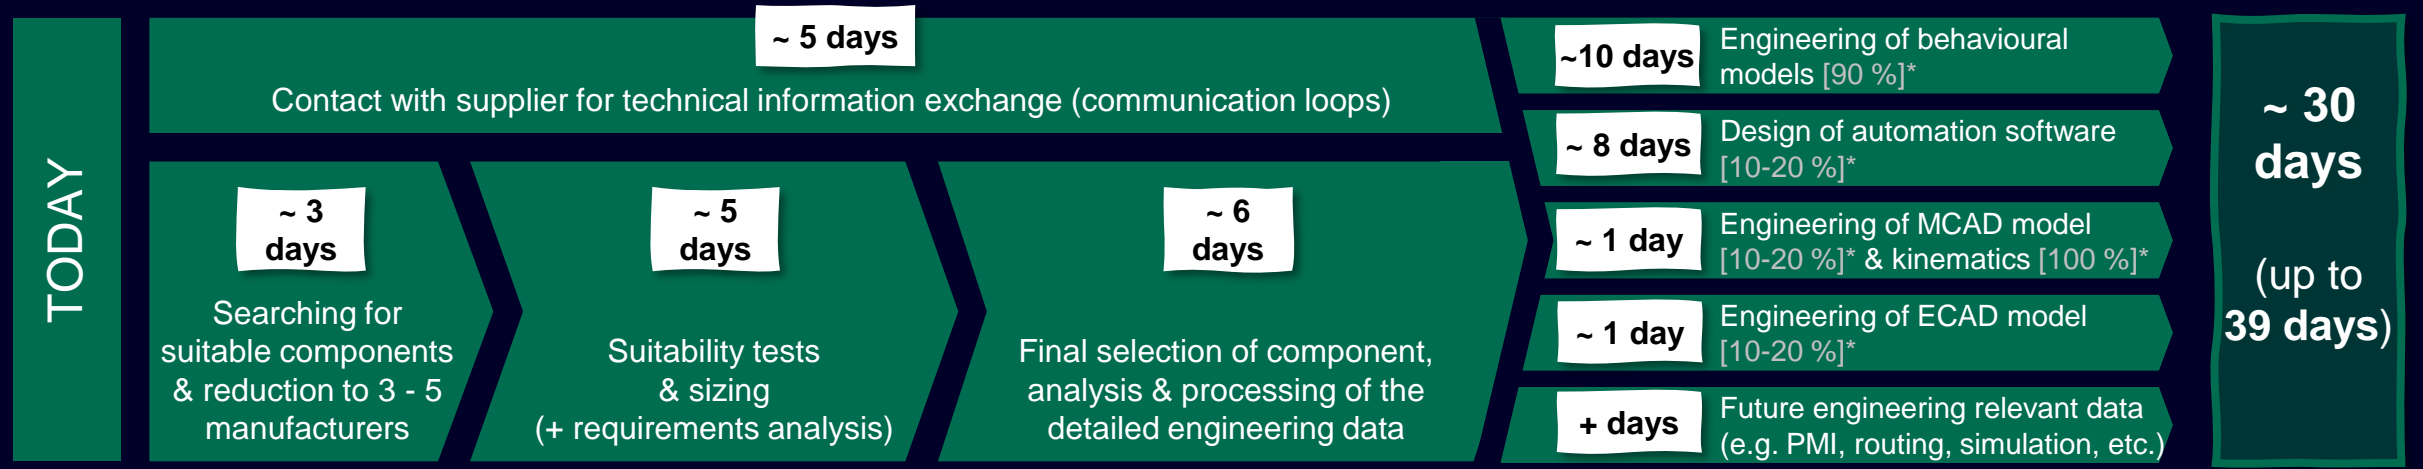

Bausch+Ströbel value proposition

Looking at the current engineering process & effort

Benefits of the AAS within the customer use case

Bausch+Ströbel value proposition

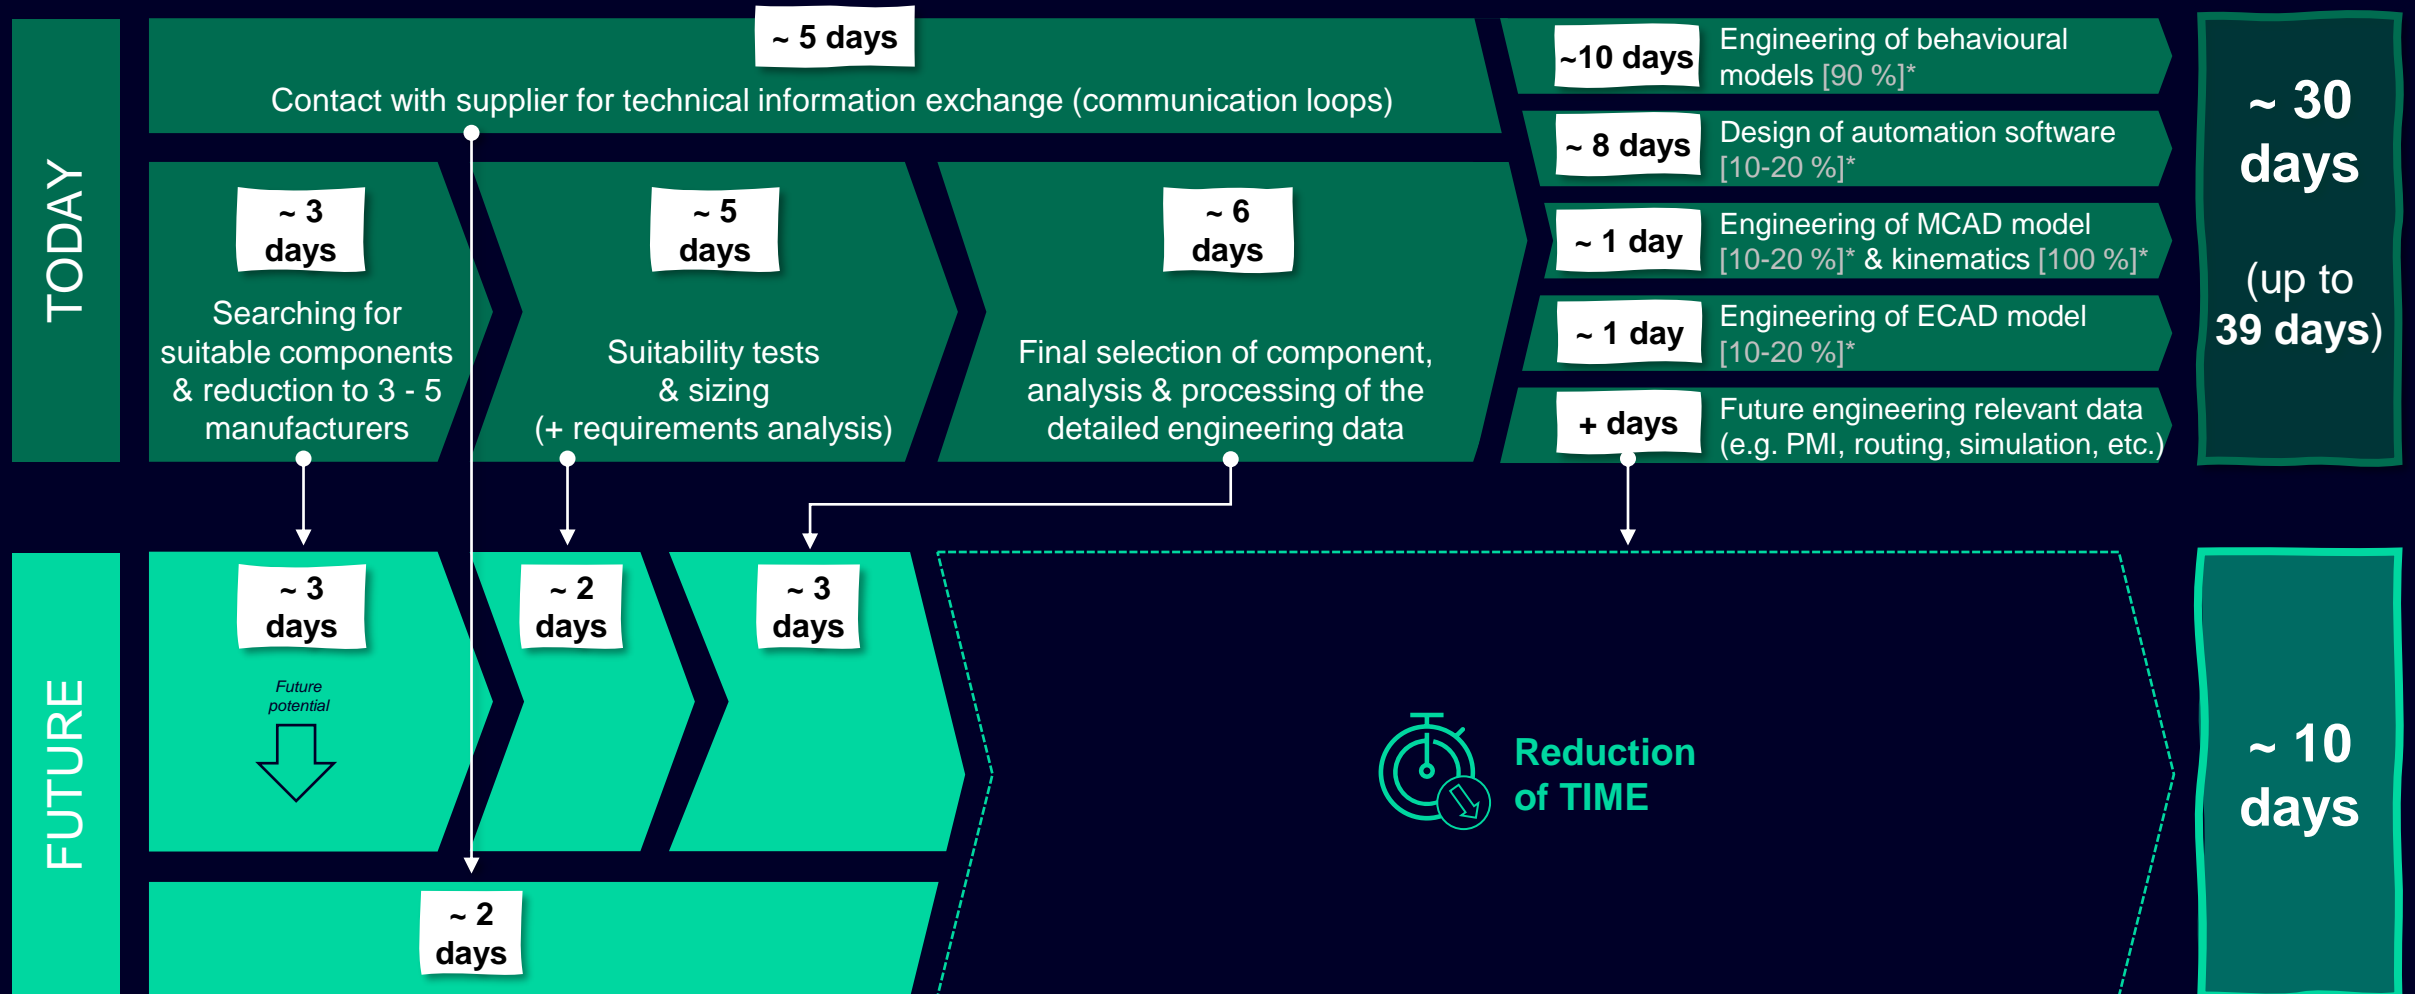

Assumptions for the effort estimation

- based on the example of a linear actuator
- assuming the digital twins are fully described by the AAS (including MCAD, kinematics, ECAD, simulation and automation data)

Benefits of the AAS within the customer use case

Bausch+Ströbel value proposition

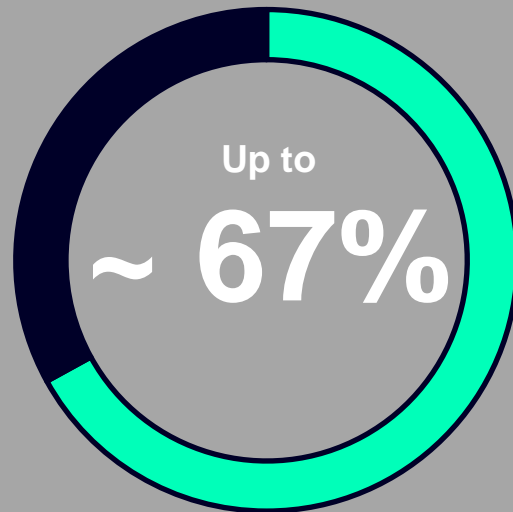

*[Evaluation of the probability in % regarding the necessity of this work]

Benefits of the AAS within the customer use case

Bausch+Ströbel value proposition

Effort

Time Reduction
within the analysed process

“There is **no** longer any **need to modify, search for, and complete the data**, so we can **directly begin our value-creating activities**,” says Erich Bauer, Vice President of Research & Development at Bausch+Ströbel.

“Thanks to the asset administration shell standard, the data is also of **higher quality** because, for example, we no longer have to reformat them.”

(up to 39 days)

~ 10 days

Key Takeaways and summary

The AAS as the digital twin standard helps to **increase efficiency and data quality** within engineering

Siemens Xcelerator portfolio offers the basis for making the **AAS manageable**

Work united for more valuable I4.0 use cases

Join the **IDTA** to be prepared for **digital twin business**
